dll file for skystar2 for windows 2 and I don't know how to get it now I do not have a compatible skystar2 to download it so can anyone help me please noelwhat: it's not really a complicated thing oh noelwhat: just unzip the file and copy it to your Documents folder and it should work fine ok ill try it Jordan_U: yes, it's not installed yotka: That's good. Now, please run: sudo apt-get install pastebinit; sudo dpkg --get-selections | grep -v deinstall | pastebinit. Hopefully it will print some output to stderr and you'll know that it's installed. yotka: You *could* also run: sudo apt-get install pastebinit && sudo dpkg --get-selections | grep -v deinstall | pastebinit. Note the difference in the output (just the output to stdout). Jordan_U: it says pastebinit is not installed, so I'm going with the command you told me to run before Ben64 i'm getting an error with the command i did'sudo gedit /home/noelwhat/Documents/SkyStar2.zip' i got an error says '*** Unable to access directory '/home/noelwhat/Documents/SkyStar2.zip/SkyStar2.zip': No such file or directory. ' Jordan_U: here it is noelwhat: when you unzip it, open up whatever file manager you normally use, look for the directory named SkyStar2 and open it up ok yotka: Good. Now try again, I want to check your dpkg status. Ben64 in the file manager i can't see a directory named SkyStar2 noelwhat: then unzip the file into the directory yotka: Did you run any other commands, or were 520fdb1ae7
