When starting Sigmaplot you will be presented with the following screen (Figure [1](#F0001)). 1. Choose the New Sigmaplot Wizard and click 'Next'. 2. In the text box *Login Information* enter the e-mail address and password you use to login to your account on Sigmaplot's web interface. 3. Choose *Yes* to the question *Are you sure you want to create an account on Sigmaplot and receive e-mail updates?*. 4. Choose *Choose Install Software* to load the Sigmaplot Installer. You are then prompted to select the operating system you are using (Figure [2](#F0002)). Select *Windows* or *MacOS*. 5. You are now

presented with a list of products you can install. Choose *Sigmaplot (*[* and click *Install*. 6. You are then presented with the Sigmaplot Installer which you will use to install and update Sigmaplot. It is recommended that you wait for the installer to complete the installation process. Once installed you will be prompted to exit. 7. Once installed, Sigmaplot will remain in the Start menu, so to make sure it is there you should look in the *All Programs* section of your Start menu. 8. Sigmaplot will only update when you first install it. If you subsequently update, you should use the installation tool again to upgrade the existing version. This completes the installation of Sigmaplot. Example calculations {#S0001} ===== 1. For example, suppose you wish to calculate the mean for a set of data, calculated as: 2. You would create a data file called *X* with all the values in column 1, as follows: 3. Before calculating the mean for a data set, Sigmaplot needs to be calibrated so that it knows the units of each data value. The *Units* menu is displayed, but if you are happy with the default units it is possible to simply skip this step. 4. You can access the *Units* menu by pressing the *U* key. The 520fdb1ae7
