Installed v3.1 and v3.0 with SSL cert - NOT WORKING Installed v2.4 and v2.3 with SSL cert - NOT WORKING Installed v2.2 with SSL cert - WORKING (WARNING) Installed v2.1 with SSL cert - WORKING (WARNING) Installed v1.6 with SSL cert - WORKING (WARNING) Installed v1.5 with SSL cert - NOT WORKING My problem is the first two try with v2.4 and v2.3 fail, the third try with v2.2 work and the last two with v1.6 and v1.5 not working. What I have found is that the cacert.pem provided by Network Solutions for the wildfly install is this: So, it's expecting to have a different cacert.pem file or for some reason the cacert.pem and cacert-chain.pem are not correct. I hope that there is someone that knows how to do this. Thanks in advance. A: I found a solution. The first solution was to install the cacert from a local copy on the server and change the path in the server.xml as an example: This is a very old solution, not working. Another solution was to install the cacert directly on the server and add a new META-INF/cacerts.jks file 520fdb1ae7
