"THIO-FLEX"

THIO-FLEX is a Government Specification Vegetable Fibre Sheet Packing (HH-P-96G) coated with nitrile rubber to provide a material to meet difficult sealing conditions. Experience has shown sealing failures often come from minute leakages between the gasket and the flange, due to tiny imperfections normally found on flange surfaces. The rubber coating, under compression, flows into these imperfections, thus assuring a leak-proof seal.

THIO-FLEX is resistant to water, petroleum, oils and solvents, aromatic and standard gasoline, lacquer solvents, toluol and benzoyl.

Although there is no longer a covering Federal Specification for coating, THIO-FLEX is manufactured to former Army ordinance Specification AXS-1128, Type1, Grade A.
