" Intent intent = new Intent(Intent.ACTION_VIEW); intent.setClassName("com.astro.astronomytools.actions.action.starset", "com.astro.astronomytools.actions.action.set.starset"); intent.setPackage("com.astro.astronomytools"); intent.putExtra("starsetId", starsetId); startActivity(intent); This is the code I am using to launch the starset in the emulator. Now, it opens the starset (action set) as expected. But, it doesn't look like I have control over the settings of the starset. In particular, I can't change the size of the simulation area. A: If you look at the apk you can find this line This line says that the starset has this setting as initial value. If you need something else, you can build it yourself, or you can modify the values. I guess it is a long process to do that, but as I see you're a new user, I'll suggest you to contact astroteam (for any help. Q: UILabel show string as bold - iOS I have a UILabel that i have created programmatically in IB. I want to be able to make it bold or italic when i select the string to display in the label. Is it possible? Thanks. You can set the textAttributes property of a UILabel to bold or italic. Your code would be something like this: label.textAttributes = [NSDictionary dictionaryWithObjectsAndKeys: NSFontAttributeName, [UIFont boldSystemFontOfSize:15], 520fdb1ae7
