After all, it is not always possible to find the necessary places after they are closed. Actually this is not impossible in Opera browser, you just need to change the settings a little bit. First method If you've worked with multiple bookmarks at once but need to end the seed, then you don't have to worry about the fact that the data won't be saved. The next time you start your browser, you can go back to the tabs. To do this, you must first make these settings. Open your Internet browser. Click the Opera button. Select Settings - General. Click the General tab. Next to Startup, set the Continue-to-disconnect status. Confirm your choice with OK. After that, you can safely close your browser with multiple tabs. After you start the program, you'll see that pages with all the websites you last worked with have opened. In this case, you can also set the Show Startup Window setting. If you set up this item, a message will appear the next time you open Opera, which will offer more options to get started. Between them, you can choose both a way to start from the last session and to load the home page (set in settings). Another way there is another way to keep tabs open in Opera. There are several ways to do this. First, open the basic settings and select the Bookmarks section. From the drop-down menu, click Create Bookmark. You can write any of the options in the line name. You can also specify a folder in which the site information will be stored. In addition, you can save the resource title to bookmarks by clicking the asterisk located to the right of the address bar. After that, you'll be prompted to bookmark your website or to an explicit panel. Select the option you like and wait only a few seconds after which the Added message will appear. Restore tabs There are situations where the browser has crashed. Normally, in this case, a window appears in front of the user at the beginning of a new job, offering more options for starting work. Select from them Continue from the connection location and work with the last performed in an Internet browser. If this could not be done for some reason, you must do the following: Start your browser and select the O item in settings. We found the SavedSss row. Copy and paste the address it contains into the address bar of file manager. Delete a file called autosave.win. Remove the last 4 characters from autosave.win.bak. We restart the browser. Council. You can call Explorer (File Manager) by pressing hotkeys Win + E. The utility also opens through system search. There are situations where tabs are inaccessible due to the fact that their panel is disabled in the browser. In this case, the menu button may also not be available. The patch is \u200b\u200bsimple - just click Alt while the opera web browser is running. From the drop-down menu, and then select the check box next to the bar item tab. Browser developers have provided the option to restore a tab that was accidentally closed. To do this, go to the main settings menu and click on Recently Closed. You'll see a list of tabs that were recently opened. After leaving the Opera, the data in this section is deleted. If the tabs were still closed and you couldn't save or restore them in the ways listed above, your visit history will help. You can enter it in the Opera menu or by pressing the hot key combination Ctrl, Shift, and H. Thus, in Opera, you can not only restore previous sessions, etc., but also save open tabs. There are several ways to do this. If you want the new seed to start from the place of the previous connection, you must set it in settings. In case your browser has been abnormally switched off, the program will itself offer to restore bookmarks. If you need tab access all the time, it's better to add them to bookmarks first. By the way, Opera has the ability to add resources to the express panel where the thumbnails of the site will be. Welcome to my blog! Setting up a browser that meets needs and interests is an important part of system optimization. Often, when you open multiple tabs in your browser and you need to go somewhere, you need to close the browser and turn off your computer. However, constantly reopening all necessary tabs in the browser is not convenient. In this article, I will see how to save open browser tabs in popular web browsers such as Mozilla, Opera, and Chrome. It is much more convenient to run the browser along with the last open tabs. How to keep tabs open in your browser, this question occurs from users when they encounter this problem. How to save open tabs in Mozilla Firefox. 1. From the browser menu, select Tools or Edit Item, depending on the browser and platform version; 2. Go to Settings 3. In the settings, go to the General tab; 4. In the Startup section where it says When Firefox starts, select from the options offered: Show windows and tabs opened last; Let's save the changes. Save open tabs in Opera. 1. Pass the path we go: Menu - Settings - General settings 2. Go to the General tab. 3. Where it says Tell your browser what to do at startup, select the option Continue from where the connection was disconnected. Save your changes. In the new version of opera, you just need to go to the program settings in the Browser tab. And immediately you will see settings to run browser behavior. Save open tabs in Chrome. 1. Click on the icon in the upper right corner of the browser, it looks like a key or, as in the screenshot, squared with lines; 2. In the browser address bar, type the address: chrome: // settings /. If you want to accidentally close an open tab, you can pin it. Google Chrome lets you open tabs for the last startup session. What if you want the current tab set to be open at any time? You can use browser extensions such as Session Buddy. In addition to extensions, you can use Chrome's built-in bookmark feature. First, you need to make sure that the bookmarks bar is enabled. If not, click the menu button to the right of the address bar. Scroll above the Bookmarks section to activate Show bookmark bar. The Bookmark All Tabs window appears. To avoid confusing the bookmark bar, we create a new folder to save tabs for current sessions. Click in this window at the bottom of the New Folder button, and enter a name, and the folder will appear at the bottom of the bookmark bar in the folder tree. Make sure the new folder is selected, and then type in the Name box, such as the date the tabs were saved or a description of their type. Then click Save. In our example, all open tabs are added as bookmarks to a folder with the current date, nesting in a folder named Saved Sessions. The Saved Sessions folder is added to the end of the bookmark line. To move it to a different location, press and hold the folder name and drag it to another location on the bookmark bar. The next time a user wants to open all tabs of this session, you need to click on the Saved Sessions folder, right-click on the submaune, and select Open All Bookmarks from the menu that appears. All bookmarks in this folder will open in a separate tab in the current browser window. You'll also see previously opened tabs. You can open all bookmarks from this folder in a new window or in incognito mode. You can remove the bookmarks folder from the tab bar by right-clicking the context menu. In the process of working with the browser we open a large number of tabs, switch between them, visit multiple web resources Today, we'll take a closer look at how you can save open tabs in Firefox. Assume that the tabs you have opened in the browser are necessary for further work, so you cannot allow them to be accidentally closed. Phase 1: Start the last time you need to install the feature in browser settings, which will allow the next time you run Mozilla Firefox to open not the start page, but the tabs that were last run. Phase 2: Pin tabs From now on, when you restart your browser, Firefox will open the same tabs that were started when you closed it. However, when working with a large number of tabs, there is a possibility that the necessary tabs, which should not be lost under any circumstances, will still be closed due to the user's lack of care. To avoid this situation, you can pin particularly important tabs to your browser. To do this, right-click on the tab and click on the Pin tab in the displayed context menu. The tab will be reduced in size, and the icon with a cross will disappear nearby, allowing it to close. If you no longer need a pinned tab, right-click on that tab and select Unbutton tab from the menu that appears, after which it will reappear. You can close it here immediately without undoing it first. When you spend time on the Internet, you often want to save the tab. Now we're going to talk about how it's done. Here's a detailed instruction! How to save tabs in Opera? There are several ways to perform an opera bookmark. Below are all the different ways to create a tab. Right-click an empty part of the page where you want to save the tab and click the bookmark page button, or press Ctrl+T. Go to the page you want to bookmark. At the top of the browser window menu, click the bookmark button will appear, add to the bookmark, and allow you to specify where you want to save the bookmark. How do I save tabs in Chrome?
