. . I'm not sure how to do that, because I never installed directx at all. Thanks, anyone that has experience with this problem in advance! A: You can download the DirectX SDK and run the installer from within Visual Studio. It will download and install the SDK for you. The DirectX SDK will get you the right binaries (d3dcompiler_46.dll, etc.) needed to compile DirectX applications. You might also have to uninstall your directx files (d3dx9_42.dll, etc.) and reinstall them from your SDK download. UPDATE: If you don't have Windows SDK installed, you can download and run the installer from this page: You may need to copy and paste the URL for the "Desktop SDK" and the "Windows SDK for Windows 7 and .NET 4" packages to your browser. After you have those installed, you can start the install wizard for the DirectX SDK, which will download and install it for you. FILED NOT FOR PUBLICATION MAY 30 2013 MOLLY C.
