dbpedia class as a .owl file. The .owl file can be imported into .dbpedia, which can then be imported into the .owl file of a .dbpedia class. Alternatively, you can manually add .owl references to your .dbpedia class and use the .dbpedia-owl-file format for .dbpedia files. This .dbpedia class is a subclass of GrammarTopic and GrammarConcept, which in turn are subclasses of TopicConcept. This class represents a single sentence. For example, `owl:NamedIndividual` can be used to reference a .dbpedia class that represents a person's name. This .dbpedia class is a subclass of `owl:Thing`. This represents the 'name' part of the GrammarConcept class. This .dbpedia class is a subclass of `owl:NamedIndividual`. This represents the 'name' part of the TopicConcept class. This .dbpedia class is a subclass of TopicConcept. This represents the 'name' part of the TopicConcept class. This .dbpedia class is a subclass of TopicConcept. This represents the 'name' part of the TopicConcept
