# Melamine Board

Plywood with a natural wood texture is used as the base material, boasting clear wood grain that can rival natural wood.

The product surface has no color difference and is fireproof, washable, wear-resistant, moisture-proof, anti-corrosive, acid-resistant, alkali-resistant, and dust-repellent. It won't develop mold or turn black due to damp walls.

This board doesn't require painting, eliminating the harmful odors and carcinogenic substances that paint may produce. It is a new generation of green, non-toxic, odorless, and pollution-free material. It uses multi-layer plywood arranged in a cross pattern as the base material, with high-quality solid wood or engineered wood as the surface material, and is manufactured through processes like cold pressing, hot pressing, sanding, and curing.

# Laquer

Oak lacquer furniture uses oak or multilayer board substrates with baking paint surface treatment.

**Oak:** Moderate density, hard texture, excellent thermoforming for durability.

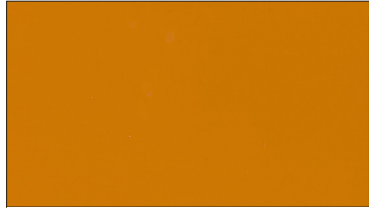

**Multilayer board:** Stable structure, strong anti-deformation, cost-effective.

Baking paint offers smooth, water/scratch-resistant surfaces in customizable gloss levels (matte/high-gloss) for modern styles. Both substrates feature strict moisture control to minimize shrinkage and ensure long-term stability.

## Tatami Cabinets

Japanese tatami cabinets feature upward-opening doors for core storage, no wall cabinets. Made of multilayer boards/solid wood, under-floor units with lift-up lids store quilts, clothes, etc., keeping spaces clutter-free. Light wood finishes and simple designs suit modern/traditional homes. Customizable height/lid styles maximize vertical storage for small rooms—tidy, efficient "all-in-one" solutions.
