Your assessment is very important to improve the work of artificial intelligence that forms the content of this project Comet-X Pro Moon is an extremely powerful and surprisingly customizable rear light. It uses COB technology (chips on board), which means that a whopping 30 diodes can have the same space, resulting in a brighter effect. CNC, trained in aluminium heat sink, ensures that they lead a long and productive lifestyle. Find the nearest dealer here lithium-polymer battery is considered the last 500 charge cycles and, like most USB lights, it meets the standard IPX4 for waterproofness. On paper, at least, you have a sporting chance to get four winters' hard use out of it. Comet-X boasts seven distinctive modes to serve most scenarios. They are selected through a positive rubberized switch that requires a reassuringly defined two-second press before it's about life and two deliberate prods to run through the settings. It's a little tricky to find in winter weight gloves, but becomes intuitive after a while and certainly no worse than a few similar designs I've been testing recently, including a similar Cateye Rapid X (a review to come). The highest constant setting produces a reasonable 40 lumens, which is bright enough for most nights. When installed vertically and used as my only rear light, friends reckoned that they could spot me from 225 meters, along the alleys. The 77-degree slick certainly helps, but despite the lens's low profile, the 270-degree bleeding offers a decent cloak of light. There are no stealth moments when entering a traffic stream from hidden interchanges during rush hour. I am also inclined to suggest it encourages drivers to give a slightly wider berth when passing. However, it was not wide enough to serve as the only source of lighting on a tagalong or trailer. Unfortunately, the running time of 1hr 22mins (1:30 cited) is not too impressive. The lower (25 and 15-lumen) constant modes are brighter than their numbers suggest, but again, 2:02 and 5:23 are best described as average. Redemption came under the guise of blinking. The most extrovert of 40-lumens returned 7:24 (7:30 quoted) from the full charge, and we say visibility of 350 meters or so on a clear night. His intermittent throbbing colleague another 2:15 and very attractive mounted on top of the helmet or messenger bag. The faster the flash felt more comfortable across town as my only source source The backlight, though commuters, would probably find a 20-lumen flash more than enough, and it turned out to be ridiculously modest - 15:08. Running flashes in the daytime is increasingly becoming the norm. Comet-X in the daytime flash 80 lumens, but literally sips power: 18:41 in the real world vs. 19 cited. On the one hand, 80 lumens is great on a foggy morning, but otherwise it's too aggressive. Read our guide to the fed's best reflective clothing and accessories from this, time charging 2hrs; bank for another 15 minutes or so from a PC or tablet. As for joining, the moon has taken the O ring route, which offers safe possession, although the bracket is included too so the Comet-X Pro can cadge the lift either on the saddle rails or rider/baggage. Ultimately, there's a lot like about the Comet-X Pro, especially if you want a sleek, high power supply. However, while there is a fine weight, there are cheaper and perhaps more usable models such as the Nite Rider in four Solas 30 modes. Verdict Capable compact light with a good presence and generally practical settings if you're thinking about buying this product using a cashback case, why not use the road.cc Top Cashback page and get some top cashback, helping to maintain your favorite independent cycling site Tell us what the light is for, and who it's aimed at. What do the producers say about it? How does this relate to your own feelings about this? Moon says: The new Comet X Pro has been designed for everyday use, with an integrated high output COB LED. I generally agree. Tell us more about the technical aspects of light? 1 pce 30 chip high output COB led - CNC aluminum thermal sink - Auto Safe Mode - Mode memory function - Rechargeable lithium-polymer battery 3.7v 300 mAh - 7 modes - Low battery charging and fully charged indicator - Automatic completely over The cut-off visibility Waterproof IPX4 - 270 degrees Total Beam Angle - 77 Degrees Point Corner - Daily Flash Mode 80 Lumen Output /19 Hours of Execution Time - Includes universal bracket, saddle rail and belt clip bracket Speed of light for construction quality: well done and reasonably protected from the elements. Appreciate the light for design and ease of use. How simple was the light to use? The rubber switch is a little tricky to start with, but the choice of modes quickly becomes intuitive. The memory function also takes the faff out of finding your favorite. Appreciate the light for the design and usability of the clamp/s selection of installation options, including saddle rail and clothing clip, definite pros. Butterfly clamp and O ring tie offer reliable, slip-free possession, even when tackling badly dirt roads. Appreciate the light for waterproofing. How did she withstand the elements? The IPX4 is pretty standard and we have resisted heavy rain and explosions from the garden hose. Evaluate the light for battery life. Work. How long does it last? How long is the time how long how long how long how long is fast charging time and the exact time time time. Appreciate light for performance: Evaluate light for durability: Heat sink bodes well for diode longevity and the unit seems well made. Rate Light for Weight: Rate Light for Value: Competitive for This Performance Level. Tell us how light is performed in general when used for its intended purpose In general, Comet-X Pro is another extremely bright light with settings for most contexts and reasonable opening time. The 270-degree arc also appears to encourage wider distances of passage from another movement. Its highest 40-lumen constant mode is very impressive, but not the most practical because of its short work time. Tell us what you particularly liked in light of good choice of settings, high quality light, even in lower modes, and reasonable charge times. Tell us that you especially did not like the easy running time in constant 40-luminal mode. Did you enjoy using light? Yes, would you consider buying light? Perhaps you would recommend the light to a friend? One to consider if they need a really bright rear light. Use this box to explain your score to a reasonable price given the output and range of settings, but the 40-lumen constant short-term setting means it's limited use. Features USB rechargeable light 1 pc (30 chips) COB high-brightness red LED LED CNC Aluminum Heat Shell Auto Safe Memory Mode feature Rechargeable lithium polymer battery (3.7V 500 mAh) 7 modes: Mode1 / Mode2 / Mode3 / FL 1 / FL 2/ FL 3/ DAY FLASH (DOUBLE BLAST) Fast release universal bracket RB-22 (suitable for all round bars and charging and fully charged indicator Automatic fully charged cutout system Side Visibility Waterproof (IPX 4) Specs Size: 73 x 18 x 21mm What's in the box? COMET-X PRO RB-22 (Universal bracket) 2 O-ring for installation: RS-G (suitable 20-35 mm diameter) RS-H (suitable 35-52 mm diameter) RB-21 (saddle rail bracket) BK-21 (belt clip) USB-WP (Water-resistant USB cable) moon comet x pro rear light instructions
