1 Evolution, the topics biology and scientific study Questions about life CONCEPT 1.1 The study of life reveals common themes CONCEPT 1.2 The core topic: Evolution explains the unity and diversity of life CONCEPT 1.3 In the study of nature, scientists make observations and form and test hypotheses CONCEPT 1.4 Science benefits from a cooperative approach and diverse points of view UNIT 1 THE CHEMISTRY OF LIFE 2 The Chemical Context of A Chemical Connection to Biology CONCEPT 2.1 Pure form and in combinations that are CALLED as compounds CONCEPT 2.2 The properties of an element depend on the structure of its atoms AB CONCEPT 2.3 The formation and function of molecules depends on the chemical bond between atoms starting with CONCEPT 2.4 Chemical reactions and break chemical bonds 3 Water and life The molecule that supports all of life CONCEPT 3.1 Polar covalent bonds in water molecules lead to hydrogen binding CONCEPT 3.2 Earth at life CONCEPT 3.3 Acid and basic conditions affect living organisms 4 carbon and the molecular diversity of life carbon: The backbone of life CONCEPT 4.1 Organic chemistry is the study of carbon compounds CONCEPT 4.2 Carbon atoms can form different molecules by being connected to four other atoms CONCEPT 4.3 Some chemical groups are the key to molecular function 5 Structure and function of large biological molecules , built from monomers CONCEPT 5.2 carbohydrates serve as fuel and building material CONCEPT 5.3 lipids are a diverse group of hydrophobic molecules CONCEPT 5.4 proteins contain a variety of structures, result in a wide range of functions CONCEPT 5.5 nucleic acids store, transmit and help to express hereditary information CONCEPT 5.6 Genomics and proteomics have biological investigation and applications UNIT 2 THE CELL 6 A Tour of the Cell the Fundamental Units of Life CONCEPT 6.1 Biologists use microscopes and biochemistry to investigate cells CONCEPT 6.2 Eukaryotic cells have internal membranes that compartmentalize their functions CONCEPT 6.3 The genetic instructions of the eukaryotic cell are housed in the nucleus and performed by the ribosomes CONCEPT 6.4 The endomembrane system regulates protein traffic and performs metabolic functions through CONCEPT 6.5 mitochondria and chloroplasts alter energy from one form to another CONCEPT 6.6 The cytomembrane system is a network of fibers. , structures and activities in the CONCEPT 6.7 cell, which organizes extracellular components and connections between the help to coordinate cellular activities CONCEPT 6.8 A cell is greater than the sum of its 7 Membrane structure and functional life at Edge CONCEPT 7.1 cell membranes are liquid mosaics of lipids and proteins CONCEPT 7.2 Membrane structure results in selective permeability CONCEPT 7.3 Passive transport is diffusion of a substance via a membrane without energy investment CONCEPT 7.4 Active transport uses energy, to move solutes against their gradients CONCEPT 7.5 Mass transport via the plasma membrane is carried out by exocytosis and endocytosis 8 An introduction to metabolism The energy of life CONCEPT 8.1 The metabolism of an organism changes matter and energy. The free energy transition of a reaction tells us whether the reaction occurs spontaneously OR not CONCEPT 8.3 ATP drives the cellular work by coupling exergonic reactions to endergonic reactions CONCEPT 8.4 enzymes accelerate metabolic reactions, by lowering energy barriers CONCEPT 8.5 Regulating enzyme activity helps to control metabolism 9 Cell respiration and fermentation life is work CONCEPT 9.1 Fuels CONCEPT 9.2 Glycolysis harvests chemical energy by oxidation of glucose to Pyruvate CONCEPT 9.3 After oxidation of pyruvate. The citric acid cycle completes the energy-rich oxidation of organic molecules CONCEPT 9.4 During oxidative phosphorylation, pairs of chemiosmosis connect electron transport to ATP synthesis CONCEPT 9.5 Fermentation and anaerobic breathing allows cells to ATP without the use of oxygen to produce CONCEPT 9.6 glycolysis and the citric acid cycle combine with many other metabolic pathways 10 photosynthesis 10.1 Photosynthesis converts light energy into the chemical energy of foods UM CONCEPT 10.2 The light reactions convert solar energy into the chemical energy of ATP and NADPH CONCEPT 10.3 The Calvin cycle Uses the chemical energy of ATP and NADPH to reduce CO2 to sugar CONCEPT 10.4 Alternative mechanisms of carbon fixation have become reflected in hot, dry climates CONCEPT 10.5Life depends on photosynthesis from 11 cell communication Cellular Messaging CONCEPT 11.1 External signals are converted into responses within the cell CONCEPT 11.2 Reception: A signal ingezing molecule binds to a receptor protein, by changing the shape concept 11.3 Transduction : Cascades of molecular interactions conduct signals from receptors to target molecules in the cell CONCEPT 11.4 Response: Cell signaling leads to the regulation of transcription or cytoplasmic activities CONCEPT 11.5 Apoptosis integrates multiple cell signaling pathways 12 The cell cycle The key roles of cell division CONCEPT 12.1 Most cell division results in identical daughter cells CONCEPT 12.2 Theo with interphase in the cell cycle CONCEPT 12.3 The eukaryotic cell cycle is fertilized by a molecular control system UNIT 3 GENETICS 13 Meiosis and Sexual Life Cycles Variations on a theme CONCEPT 13.1 Offspring acquire genes from parents by inheriting chromosomes KONZEPT 13.2 meiosis change in sex life cycles AB CONCEPT 13.3 Meiosis reduces the number of chromosome sets from diploid to haploid CONCEPT 13.4 Genetic variation produced in sex life cycles contributes to evolution 14 mendel and the gene idea drawing from the deck of the Gene CONCEPT 14.1 Mendel used the scientific approach to identify two laws of heritage CONCEPT 14.2 Probability laws regulate Mendelian inheritance law CONCEPT 14.3 Inheritance patterns are often more complex than from simple Mendeli AN genetics CONCEPT 14.4 Many human characteristics follow Mendelian genetic patterns 15 The chromosomal basis of genetic sequencing of genes along chromosomes CONCEPT 15.1 Morgan showed that mendelian inheritance has its physical basis in the behavior of chromosomes : scientific study CONCEPT 15.2 sex-linked genes show unique heredity pattern KONZEPT 15.3 Linked genes tend to To be inherited together because they are close to each other on the same chromosome CONCEPT 15.4 Changes in chromosome count or structure cause some genetic disorders CONCEPT 15.5 Some inheritance patterns are exceptions to standard mendelian inheritance 16 The molecular basis of inheritance life operating instructions CONCEPT 16.1 DNA is the genetic material CONCEPT 16.2 Many proteins work together in DNA replication and repair CONCEPT 16. consists of a DNA molecule packed with proteins 17 gene expression: From gene to protein The flow of genetic information CONCEPT 17.1 genes specify proteins via transcription and translation CONCEPT 17.2 transcription is the DNA-controlled synthesis of RNA: a closer look CONCEPT 17.3 Eu Caryotic cells modify RNA according to transcription CONCEPT 17.4 Translation is the RNA-controlled synthesis of a polypeptide: a closer look CONCEPT 17.5 Eukaryotic cells modify RNA according to transcription CONCEPT 17.4 Translation is the RNA-controlled synthesis of a polypeptide. : a closer look CONCEPT 17.5 Mutations of one or a few nucleotides can affect the protein structure and function 18 Regulation of Gene Expression Beauty in the Eye of the Beholder CONCEPT 18.1 Bacteria often react to environmental changes by regulating transcripti ON CONCEPT 18.2 The eukaryotic gene expression is regulated in many stages. CONCEPT 18.5 Cancer results from genetic changes that affect cell cycle control 19 viruses A borrowed CONCEPT 19.1 A virus consists of a nucleic acid surrounded by a protein mantle CONCEPT 19.2 Viruses replicate only in host cells CONCEPT 19.3 Viruses and prions are huge pathogens in animals and plants 20 DNA tools and biotechnology The DNA toolbox CONCEPT 20.1 DNA sequencing and DNA cloning are valuable tools for genetic engineering and biological investigation CONCEPT 20.2 Biologists use DNA technology TO study gene expression and function CONCEPT 20.3 Cloned organisms and stem cells are useful for basic research and other applications CONCEPT 20.4 The practical applications of DNA-based biotechnology affect our lives in many ways 21 genomes and their evolution reading the leaves from the Tree of Life CONCEPT 21.1 The Human Genome Project promoted the development of faster, more cost-effective sequencing techniques CONCEPT 21.2 Scientists use bioinformatics to analyze genomes and their functions. , Number of genes and gene density CONCEPT 21.4 Multicellular eukaryotes have a lot of non-coding DNA and many multigene families CONCEPT 21.5 Duplication, reordering and mutation of DNA contribute to genome development in CONCEPT 21.6 The comparison of genome sequences provides clues to evolution and development MECHANISMS 4 OF EVOLUTION 22 Descent with Modification: A Darwinian View of Life Endless Forms Most Beautiful CONCEPT 22.1 Inhabited by immutable species, with modification explained by natural selection the adaptations of organisms and the unity and diversity of life CONCEPT 22.3 Evolution is supported by an overwhelming amount of scientific knowledge 23 The evolution of populations The smallest unit of evolution CONCEPT 23.1 Genetic variation allows evolution possible CONCEPT 23.2 The Hardy-Weinberg equation can be used to test whether a population developed CONCEPT 23.3 Natural Selection , genetic drift, and gene flow can change allele frequencies in a population CONCEPT 23.4 Natural selection is the only mechanism the consistently Caused Adaptive Evolution 24 The Origin of Species The Mystery of Secrets CONCEPT 24.1 The Concept of Biological Species Emphasizes Reproductive Isolation CONCEPT 24.2 Speciation can take place with or without Geographical Separation CONCEPT 24.3 Hybrid Zones Reveal Factors That Cause Reproductive Isolation CONCEPT 24.4 Many Genes 25 The History of Life on Earth A Surprise in the Desert CONCEPT 25.1 Conditions on the early earth enabled the origin of life CONCEPT 25.2 The fossil record documents the history of life CONCEPT 25.3 key events in History includes the origins of single-celled and multicellular organisms and the settlement of land CONCEPT 25.4 The rise and fall of groups of organisms reflect differences in speciation and extinction CONCEPT 25.5 Significant changes in body shape can be Changes in the sequences and regulation of the developmental genes CONCEPT 25.6 Evolution is not goal-oriented UNIT 5 THE EVOLUTIONARY HISTORY OF BIOLOGICAL DEVELOPMENT 26 Phylogeny and the Tree of Life Study of the Tree of Life CONCEPT 26.Phy1 show evolutionary relationships CONCEPT 26.2 Phylogenies are derived from morphological and molecular data CONCEPT 26.3 Common characters are used to construct phylogenetic trees CONCEPT 26.4 The evolutionary history of an organism is documented in its genome CONCEPT 26.5 Molecular clock s help track evolution time CONCEPT 26.6 Our understanding of the tree of life continues to change on the basis of new data 27 bacteria and Archaea Masters of Adaptation CONCEPT 27.1 Structural and functional adaptations contribute to the prokaryotic success CONCEPT 27.2 Rapid reproduction in , mutation, and genetic recombination promote genetic diversity in prokaryotes CONCEPT 27.3 Diverse nutritional and metabolic adaptations have evolved into prokaryotes CONCEPT 27.4 Prokaryotes have radiated in a diverse set of lines CONCEPT 27.5 prokaryotes play crucial role in the biosphere CONCEPT 27 .6 Prokar Yoten have both positive and harmful effects on humans 28 protists life small CONCEPT 28.1 Most eukaryotes are single-celled organisms CONCEPT 28.2 excavations contain protists with modified mitochondria and protists with unique flagella CONCEPT 28.3 SAR is a very different group of protists defined by DNA similarities CONCEPT 28.4 Red algae and green algae are the closest relatives of the land plants CONCEPT 28.5 Unikonts belong protists, which are closely linked to fungi and animals CONCEPT 28.6 Protists Play key roles in ecological communities 29 Plant diversity I: How plants colonized land The greening of the earth CONCEPT 29.1 Plants developed from green algae CONCEPT 29.2 Mosses and other non-vascular plants have dominated life cycles of gametophytes CONCEPT 29.3 ferns and others seedless vascular plants were the first plants to grow high 30 plant diversity II: The evolution of seed plants Transforming the World CONCEPT 30.1 seeds and pollen grains are important adaptations for life on land CONCEPT 30.2 Gymnosperms carry bare seeds, typical on conesN CONCEPT 30.3 The reproduction adaptations of angiosperms include flowers and fruits CONCEPT 30.4 Human well-being depends on from 31 mushrooms Mighty mushrooms CONCEPT 31.1 mushrooms are heterotrophs that feed by absorption CONCEPT CONCEPT Spores to produce sexual or asexual life cycles KONZEPT 31.3 The ancestor of the fungi was an aquatic, single-celled, flagellated protist CONCEPT 31.4 mushrooms have radiated into a variety of lines CONCEPT 31.5 mushrooms play key roles in nutrient cycle, ecological interactions, and human well-being 32 An overview of animal diversity A kingdom of consumers CONCEPT 32.1 animals are multicellular, heterotrophic eukaryotes with tissues that develop from embryonic layers CONCEPT 32.2 The history of animals extends over more than half of the billion years CONCEPT 32.3 Animals can be characterized by body plans CONCEPT 32.4 Views of animal phylogeny continue to be shaped by new molecular and morphological data 33 An introduction to Invertebrate A Dragon Without Backbone CONCEPT 33.1 Sponges are basal animals, the tissues missing CONCEPT 33.2 Cnidarians are an ancient phylum of eumetazoans CONCEPT 33.3 Lophotrochozoans, one that have the widest range of carcass shapes CONCEPT 33.4 Ecdysozoans are the most species-rich animal group CONCEPT 33.5 Echinoderms and choral data are deuterostome 34 The origin and evolution of vertebrates Half a billion years of backbone CONCEPT 34.1 chordates have a notochord and a dorsal, Hollow nerve cord CONCEPT 34.2 Vertebrates are chords that have a backbone CONCEPT 34.3 Gnathostomes are vertebrates, the jaws have CONCEPT 34.4 tetrapods are gnathostomes, the limbs have CONCEPT 34.5 amniotes are tetrapods that have a terrestrial adapted egg CONCEPT 34.6 mammals are amniotes, the hairs have that have a large brain and two-legged locomotion UNIT 6 PLANT FORM AND FUNCTION 35 Vascular plant structure, growth and development are plants computers? CONCEPT 35.1 Plants have a hierarchical organisation consisting of organs, Tissues and cells CONCEPT 35.2 Different meristems produce new cells for primary and secondary growth CONCEPT 35.3 Primary growth prolongs roots and shoots CONCEPT 35.4 Secondary growth increases the diameter of stems and roots in woody plants CONCEPT 35.5 growth, morphogenesis and cell differentiation produce the plant body 36 Resource capture and transport in vascular plants A whole lot of shaking Going ON CONCEPT 36.1 Adjustments were Evolution of vascular plants CONCEPT 36.2 Various mechanisms Transporting substances over short or long distances CONCEPT 36.3 Transpiration drives the transport of water and minerals from roots to shoots via the Xylem CONCEPT 36.4 The transpiration rate is transported by stomata CONCEPT 36.5 sugars from springs to sinks via the phloem symplast is highly dynamic 37 Soil and plant nutrition The carnivore Carnivore CONCEPT 37.1 soil contains a lively, complex ecosystem CONCEPT 37.2 Plant roots absorb essential elements from the soil CONCEPT 37.3 Plant nutrition often involves relationships with other organisms 38 Angiosperm reproduction and biotechnology flowers of Deceit CONCEPT 38.1 Flowers, Double fertilization, and fruits are key features of the angiosperm life cycle CONCEPT 38.2 Flower plants re sexually, sexually asexual , or both CONCEPT 38.3 humans modify cultures by breeding and genetic engineering 39 plant reactions to internal and external signals stimuli and a stationary life KONZEPT 39.1 signal transduction pathways connect signal reception with reaction CONCEPT 39.2 plant hormones help, Coordinate growth, development and reactions to stimuli CONCEPT 39.3 Reactions to light are crucial for plant success CONCEPT 39.4 Plants respond to a variety of stimuli except light CONCEPT 39.5 plants react to attacks by pathogens and herbivores UNIT 7 ANIMAL FORM AND FUNCTION 40 Basic Principles of Animal Shape and Function Diverse Forms, Common Challenges CONCEPT 40.1 Animal Shape and Function are connected at all levels of the organization CONCEPT 40.2 Feedback control keeps the inner environment in many animals CONCEPT 40.3 House-ostatic processes for thermoregulation include form, function and behavior CONCEPT 40.4 Energy demand related to animal size, Activity and environment 41 Animal nutrition The need to develop , organic building blocks and essential nutrients provide CONCEPT 41.2 Food processing involves ingestion, digestion, absorption and elimination CONCEPT 41.3 organs that are specialized in sequential stages of food processing, the mammalian digestive system CONCEPT 41.4 Evolutionary adaptations of vertebrate digestion systems correlate with diet , energy storage and appetite 42 circulation and gas exchange points CONCEPT 42.1 Circulatory systems connect exchange surfaces with cells throughout the body CONCEPT 42.2 Coordinated cycles of cardiac contraction drive the double circulation in mammals CONCEPT 42.3 Patterns of blood pressure and flow reflect the structure Arrangement of blood vessels CONCEPT 42.4 blood components work in exchange, transport and defense CONCEPT 42.5 Gas exchange takes place via specialized breathing surfaces CONCEPT 42.6 Respiratory ventilated the lungs CONCEPT 42.7 Adjustments for gas exchange include pigments that bind gases and transport 43 The immune system detection and reaction CONCEPT 43.1. Innate immunity, detection reaction to characteristics common to groups of pathogens, CONCEPT 43.2 In adaptive immunity, Receptors provide pathogen-specific detection CONCEPT 43.3 Adaptive immunity protects against infection of bodily fluids and body cells CONCEPT 43.4 Disorders in the function of the immune system can trigger disease 44 osmoregulation and excretion or aggravate A balancing act CONCEPT 44.1 Osmoregulation compensates for the uptake and loss of water and slutes CONCEPT 44.2 The nitrogen waste of an animal reflects its phyloensis and habitat CONCEPT 44.3 Variations on a tubular theme CONCEPT 44.4 The nephron is organized for the gradual processing of blood filtrate CONCEPT 44.5 hormone cycles connecting kidney function, Water balance, and blood pressure 45 hormones and the endocrine system The body long-distance regulators CONCEPT 45.1 hormones and other signaling molecules bind to target receptors, triggerspecific reaction pathways CONCEPT 45.2 feedback regulation and coordination with the nervous system are common in hormonal pathways CONCEPT 45.3 andocrine glands react to various stimuli in regulating homeostasis , Development and behaviour 46 Animal Reproduction Let Me Count the Ways CONCEPT 46.1 Both asexual and sexual reproduction end in the animal kingdom CONCEPT 46.2 Fertilization depends on mechanisms, bringing together the sperm and eggs of the same species CONCEPT 46.3 Reproductive organs produce and transport gametes CONCEPT 46.4 The interplay of tropical and sex hormones regulates mammalian reproduction CONCEPT 46.5. , an embryo develops completely within the uterus of the mother 47 Animal Development A body-building plan CONCEPT 47.1 Initiating fertilization and cleavage embryonic development CONCEPT 47.2 Morphogenesis in animals involves specific changes in cell form, Position and survival CONCEPT 47.3 Cytoplasmic determinants and inductive signals regulate the cell fate 48 neurons, synapses and signal lines of communication CONCEPT 48.1 Neuron structure and organization reflect function in information transfer CONCEPT 48.2 Ion pumps and ion channels determine the resting potential of a neuron CONCEPT 48.3 Action potentials are the signals carried out by axons CONCEPT 48.4 Neurons , which communicate with other cells at Synapses 49 Nervous System Command and Control Center CONCEPT 49.1 Nervous systems consisting of circuits of neurons and supporting cells CONCEPT 4.9.2 The vertebrate brain is regionally specialized CONCEPT 49.3 The cerebral cortex controls the voluntary movement and cognitive functions CONCEPT 49.4 Changes in synaptic connections are due to memory and learning CONCEPT 49.5 nervous system can be explained molecularly and motor mechanisms Sense and Sensibility CONCEPT 50.1 Sensory receptors transduce stimulus energy and transmit signals to the central nervous system CONCEPT 50.2 in the hearing and equilibrium area, Mechanoreceptors detect moving fluid or deposition of particles CONCEPT 50.3 The diverse visual receptors of animals depend on light-absorbing pigments from CONCEPT 50.4 The senses of taste and smell rely on similar sets of sensory receptors CONCEPT 50.5 The physical interaction of protein filaments is required for muscle function CONCEPT 50.6 Skeletal systems Transform The contraction in motion 51 Animal Behavior The How and Why of Animal Activity CONCEPT 51.1. Discrete sensory inputs can stimulate both simple and complex behaviors CONCEPT 51.2 Learning provides specific connections between experience and behavior on CONCEPT 51.3 Selection for individual survival and reproductive success can explain different behaviors CONCEPT 51.4 Genetic analyses and the concept of inclusive fitness form a basis for studying the evolution of behavior UNIT 8 ECOLOGY 52 An introduction to ecology and biosphere Earth's climate varies depending on width and season and changes rapidly CONCEPT 52.2 The distribution of terrestrial biomes is controlled by climate and disturbance CONCEPT 52.3 Aquatic biomes are diverse and dynamic systems that cover most of the earth CONCEPT 52.4 Interactions between organisms and environment limit the distribution of species CONCEPT 52.5 Ecological change and evolution affect over long and short periods 53 Population Ecology Turtle Tracks CONCEPT 53.1 Biotic factors , Dispersion and Demography CONCEPT 53.2 The exponential model describes population growth in an idealised, Unlimited Environment CONCEPT 53.3 The logistic model describes how a population grows more slowly as it approaches its viability CONCEPT 53.4 Life history features are products of natural selection CONCEPT 53.5 Density-dependent factors regulating population growth CONCEPT 53.6 The human population no longer grows exponentially, but still grows rapidly 54 Community Ecology Communities in Motion CONCEPT 54.1 Community Interactions are classified according to whether they help , harm or no impact on the species involved have CONCEPT 54.2 Diversity and trophic structure characterize biological communities CONCEPT 54.3 Disturbance influenced biodiversity and composition CONCEPT 54.4 Biogeographical factors influence community diversity CONCEPT 54.5 Pathogens change the Community structure locally and globally 55 and Restoration Ecology Transformed to Tundra CONCEPT 55.1 Physical laws regulate the energy flow and the chemical cycle Ecosystems CONCEPT 55.2 Energy and other limiting factors control primary production in ecosystems CONCEPT 55.3 Energy transfer between trophic levels is usually only 10% efficient SCONCEPT 55.4 Biological and geochemical processes cycle Nutrients and water in ecosystems CONCEPT 55.5 Restoration Ecologists return degraded ecosystems to a more natural state 56 Conservation Biology and Global Change Psychedelic Treasure CONCEPT 56.1 Human activities threaten the biodiversity of the earth 56.Population focuses on population , Genetic diversity and critical habitat CONCEPT 56.3 Landscape and regional nature conservation contribute to the conservation of biodiversity at CONCEPT 56.4 The earth is changing rapidly as a result of human actions CONCEPT 56.5 Sustainable development can improve human life while preserving biodiversity
