NcLEX-RN® is a registered trademark of the National Board of State Board of Care Boards, Inc. Test names are the property of the respective trademark holders, none of which endorses or is not affiliated with Kaplan. Based on data from 475 Kaplan Nursing NcLEX-RN CAT registration, out of 27 academic programs/institutions in 14 different states. Students had to accept at least 1 CAT and for which Kaplan had to obtain an institutionally verified license pass/failure result obtained between 2017 and 2019 in order to qualify for inclusion. Law. Chapter 1 NcLEX-RN® Examination Group 1: NcLEX-RN® Examination Group 2: A Guide to Tested, Repeating NcLEX-RN® Examination Figure 1 Figure 2 Group I: NcLEX-RN® Have You talked to graduate students about their experience passing the NcLEX-RN exam? They probably told you that the test wasn't like any nurse test they've ever taken. How can that be? NcLEX-RN® exam primarily several variants of test questions, and as a student nurse you are used to taking several test options. In fact, you have taken so many tests by the time you graduate from nursing school that you probably believe that there can be no surprises on the care test. However, there is another surprise waiting for you and it is called the NcLEX-RN® exam. The NcLEX-RN exam is in some ways similar to other standardized exams but differs in others: the NcLEX-RN exam® written by nurse specialists who are experts in nursing content. All content is selected to allow a beginner practitioner to prove minimal competence across all areas of the test plan. Testing. The questions are written on four different levels based on Bloom's taxonomy for cognitive domain: knowledge, understanding, application and analysis. Minimum competency questions are most often asked at the application level rather than at the knowledge level. All the answers to the question are similar in length and subject matter and grammatically correct. All test items have been thoroughly tested. The National Council knows that these issues are valid; all correct answers are documented in two different sources. What does this mean for you? The National Council determines what minimum competence is, entry-level care. The questions and answers are written in such a way that you cannot predict or recognize the correct answer. The National Council is well aware of strategies regarding the length of responses, grammar, etc. They make sure you can't use these strategies to choose the right answers. English majors have no advantage! The choice of answers has been thoroughly tested. People who write test questions make the wrong choice of answer attractive for careless testers. What is the behavior of the NcLEX-RN test® of the examination? NcLEX-RN exam don't just test your body nurses' knowledge; it assumes that you have knowledge because you have graduated from nursing school. Also, it doesn't just test your understanding of the material; it suggests that you understand the nursing knowledge you learned in nursing school. So what is this exam test? NcLEX-RN® first checks your nurse decisions and discretion. It tests your ability to think critically and solve problems. The authors of the test recognize that as a beginner practice you will manage LPNs/LVNs and nursing assistants to provide care for a group of clients. As head of the nursing team, you must make safe and competent judgments about customer care. Critical Thinking and Clinical Judgment What Does the Term For Critical Thinking Mean? Critical thinking is a problem solving that involves thinking creatively. Using clinical judgment, you successfully solve problems every day in the clinical field. You are probably comfortable with this concept when actually caring for customers. Although you have had many practice of critical thinking in the clinical field, you may have had less practice thinking critically and using clinical judgment on test issues. Why is that? During nursing school, you take exams developed by care instructors to check a certain amount of content. Many of these issues are at the level of knowledge. This includes acknowledging and recalling ideas or materials that you read in your care textbooks and discussed in the classroom. This is the most basic level of testing. At nursing school, you are also given insight-in questions. These questions you understand the meaning of the material. Material. You answer the minimum competency questions in the NcLEX-RN exam®, you won't see many questions of the level of understanding. Test writers assume that you know and understand the facts that you learned in nursing school. Minimum competency questions in the NcLEX-RN exam® written at the application and/or analysis level. Remember that the exam tests your ability to make safe judgments about customer care. Your ability to solve problems is not tested with questions of knowledge or understanding. Application involves taking facts that you know and using them to make a care decision. You should be able to answer questions at the application level to prove your competence on the NcLEX-RN® exam. Strategies that don't work on NcLEX-RN® Examination whether you understand it or not, you have developed a set of strategies in the school of nursing to answer teacher-generated test questions that are written at the level of knowledge/understanding. These strategies include: Crumming hundreds of facts about disease processes and patient care. Recognizing and recalling facts rather than understanding pathophysiology and the needs of a client with the disease. Knowing who wrote the question and what is important for this instructor. Predicting answers based on what you remember or who wrote the test question. Choosing an answer that differs in length compared to other options. Choosing the right answer. If in doubt, choosing the answer S. Critical thinking and clinical judgment about NcLEX-RN® examination exam is not a fact-finding test. You should be able to correctly determine what the question is asking. Focus on the background info that the question is asking. Remembers that the nCLEX-RN® exam tests your ability to think critically. Critical Thinking: A Nurse Includes: Observing a Decision on What's Important Looking For Patterns and Relationships Revealing The Problem of Transferring Knowledge from One Situation to Another Application of Knowledge Discrimination Between Possible Choice and/or Action Assessment Courses According to Established Criteria Facts About NcLEX-RN® Examination OF PURPOSE OF THE EXAM TO Determine. If you are a safe and effective nurse To protect the public to test for minimal competence in practice care TEST CONTENT Based on knowledge and activities of the entry-level nurse Written nurse Written by Faculty nurses and clinical specialists Most questions are offline, many choice questions, with four possible options for answering Some questions may ask you to choose all the answers that apply, fill the gap, listen to the audio element, or answer questions that include graphics. Some questions may ask you to use the mouse to locate the graph, drag and throw answers from the disordered response column to the orderly column or click on the exhibition tab. Exhibition. Comprehensive care content rather than on the medical model of medical, surgical, obstetrics, pediatrics and psychiatric care includes 15 experimental questions being tested for future exams. These questions don't count. ADMINISTRATION PPC (Computer Adaptive Test) is adapted to your knowledge, skills and skill level. The sequence of questions is defined interactively. The computer selects questions based on the complexity of the item and the test plan. You will individually schedule the date and time of the exam at the test center. You're sitting on a separate computer station. TAKING EXAM Computer knowledge is not required to take this exam. You use the mouse to highlight and block in your response. You receive instructions and practical exercises before the exam. Any necessary background information appears on the screen with a question. The computer selects the first question at or just below the passing level. The next question is chosen by the computer based on your answer to the first question. If you've got a question that looks like the answer to a question, don't assume that you answered the first question incorrectly. Choose the best answer to each question. If your answer is correct, the next question is a little more complicated. If your answer is wrong, the next question is a little easier. The questions are selected to accurately measure your abilities in each area of the test plan. TIMING There is no time limit for each individual issue. You will answer at least 75 questions for a maximum of 265 questions. The maximum exam time is 6 hours, including practical exercises and all breaks. A pop-up appears, offering an additional 10-minute break after 2 hours and 3.5 hours of testing. EXAM WILL END When the computer has determined your ability, or when a maximum of 6 hours of testing is achieved, or when a maximum of 265 questions have been answered. SCORING It's a pass/failure exam. There is no penalty for guessing. Fifteen experimental questions are included in the exam. CONCERNS You can't change the answers once you choose NEXT. The questions are selected by the computer according to the accuracy of your previous answers. You can't scroll back. You can't miss the question. You have to answer the question. ADVANTAGES testing available year-round 15 hours a day, 6 days a week, at 6-hour time intervals. The results are published by a separate Council of State; time will vary depending on the Council of State. If you fail, your condition will determine when to retake. What NcLEX-RN®: Customer needs safe and effective care (17-23%) Safety and infection control (9-15%) Promoting health promotion and maintenance (6-12%) Psychosocial integrity (6-12%) Physiological Basic care and comfort (6-12%) Pharmacological and parental therapy (12-18%) Risk reduction (9-15%) Physiological adaptation (11-17%) Registration information is available from the State Care Board or your school's senior nursing counselor. To get the address and phone number of the individual State Board of Nursing, contact: National Board of State Nursing Boards 111 E. Wacker Drive Suite 2900 Chicago, IL 60601-4277 www.ncsbn.org Unit 2: A guide to test-takers Repeating NcLEX-RN® Exam Some people may never have to read this section, but it is that others will. The most important advice we can give to repeat test-takers: Don't despair. There is hope. We can take you through the NcLEX-RN® exam. Contact nlex-expert@kaplan.com to help you continue your training. You are not alone think about that terrible day when a big brown envelope arrived. You just couldn't believe it. You should have told your family, friends, your supervisor, and your colleagues that you didn't make it. When this happens, every unsuccessful candidate feels that he or she is the only person who has not passed the exam. Should you check again? Absolutely! You have completed your nursing education to become an RN. The initial reaction of many unsuccessful candidates was to announce I would never return! It was the worst experience of my life! What do I do now? When you first got the results, you went through a period of grief - the same stages that you learned about in nursing school. Three to four weeks later, you will find that you want to start preparing for the retake exam. How to interpret unsuccessful test results Most unsuccessful candidates on NcLEX-RN® exam usually say that I almost passed. Some of you almost passed, and some of you were not very close. If you fail the exam, you will receive a performance report from a National Council candidate. In this report, you will be told how many questions you answered in the exam. The more questions you answered, the closer you got to the passage. The only way to get questions after answering the first 75 is if you're answering questions close to the difficulty required to pass the exam. If you answer questions well above the level required to pass or well below the level required for passing, your exam will end with 75 questions. Figure 1 shows an idea of what happens when a candidate fails to deal with 75 questions. This student did not come close to passing. In 75 questions, this student demonstrates an inability to consistently answer questions correctly at or above the level of difficulty required to pass the exam. This usually indicates a lack of knowledge of nurses, significant difficulties in taking a standardized test, or a lack of critical thinking skills. Figure 1 Figure 2 shows what happens when a candidate all 265 questions and fails. This candidate is almost over. If the last question is below the level of complexity required for candidate fails. Figure 2 If the last question is above the level of difficulty required for passage, the candidate passes. If you took the test longer than 75 questions and failed, you were probably familiar with most of the content you saw on the exam, but you may have difficulty using critical thinking skills or passing standardized tests. The information contained in the Candidate Performance Report will help you identify your strengths and weaknesses in this particular NcLEX-RN® exam. This knowledge will help you determine where to concentrate your studies in preparation for retake exam. As I prepared for the exam, I saw topics of care that were not familiar to me. Review the candidate's performance report and identify the areas the customer needs below the passage. View the Kaplan test results and identify areas where your scores were below the benchmark score. Viewing content using video content and the NcLEX-RN Content Review Guide®. Starting with the weakest areas of content and moving into stronger areas. I saw drugs I didn't know. It's hard to remember individual medications. Organize your drug research based on a classification system. The Pharmacology section in your NcLEX-RN® Content Review guide is organized in accordance with the classification of medications. You will need to remember the common and trading names of the drugs in each classification. As you read the topics in your guide, if the medicine is mentioned, see it so you understand the context in which it is used. I was preparing for the exam the same way I was preparing for tests at nursing school. The purpose of the NcLEX-RN exam® is to test the critical thinking and clinical judgments needed to safely care for clients in all health facilities. The questions at the NcLEX-RN level® are written at the level of application and analysis. If you're preparing for NcLEX-RN® answering questions of knowledge and understanding, you're not using the required type of thinking. The solution tree has been developed as a basis of video to approaching level of application and analysis. I memorized the facts without understanding the principles of customer care. If you remember the facts about the disease process, it may not help you answer questions on NcLEX-RN®. NcLEX-RN® tests a candidate's ability to prioritize, provide safe and effective care, and evaluate a customer's response to care. Understanding, not memorization, allows you to approach, analyze and determine the best clinical judgment for each question. NcLEX exam I wasn't sure about the type of questions that I would like to see at NcLEX-RN®. Go www.ncsbn.org and view the candidate's information about the alternative question item format and test plan for the exam. When you take Kaplan nursing tests, questions are written level of complexity required for the NcLEX-RN® exam® tests your ability to think critically in difficult customer service situations. I don't understand computer adaptive testing (CAT). View candidate information www.ncsbn.org computer adaptive testing. When taking the NcLEX-RN® exam, whether you realize it or not, you've developed a set of test-taking strategies in the nursing school to answer teacher-generated test questions that are written at the level of knowledge/understanding of difficulty. These strategies include: Crumming hundreds of facts about disease processes and patient care. Recognizing and recalling facts rather than understanding pathophysiology and the needs of a client with the disease. Knowing who wrote the question and what is important for this instructor. Predict answers based on what you remember or who wrote the test question. Choosing an answer that differs in length compared to other options. Choosing the right answer. If in doubt, choosing the answer S. These strategies will not work because the NcLEX-RN® exam tests your ability to make safe, competent decisions. Successful NcLEX-RN test-takers' examinations have a good understanding of the nurses' content. Be able to solve each test question with great confidence because they assume that they can figure out the right answer. Don't give up if they're not sure of the answer. They are not afraid to think about the question and possible elections to choose the right answer. Have the know-how to correctly identify the issue. Focus on this issue. Can pace yourself for a long test, and take a break when they need one. Failed NcLEX-RN® that they either know or do not know the answer to the question. Remember the facts to answer questions by reviewing or acknowledging. Read the question, read the answers, read the question and select the answer. Choose answers based on guesswork or feeling, rather than thinking critically. Answer questions based on personal experience, not on the theory of care. Give up too early because they are not ready to think about questions and answers. Don't focus on this issue. Clutch through the questions without taking a break when they need one. Work to become a successful test-taker! Get ready to retake NcLEX-RN® assess your knowledge of the content. Compare your individual Kaplan diagnostic test results with the candidate performance report you received from the National Council of State Care Boards. What are the similarities in these two results? What are the differences? In which area did you do well? Which area do you need to learn more in? Think about your strengths and weaknesses. Note that the results of the Kaplan diagnostic test and the Diagnostic Profile of the National Council are organized in accordance with the categories of customer needs. It is important that you have a comprehensive understanding of the concept of customer needs. Schedule classes. Plan your training time to include all nursing materials, but highlight areas identified as weaknesses in the Kaplan diagnostic exam and in the National Board's Report on Candidate Performance. Preparation for the NcLEX-RN® exam should include at least 4-6 weeks of concentrated study. Set specific daily goals and reward yourself when you fulfill them. Don't let yourself fall behind. Start learning. At first, you may find it difficult to view the contents of the care. You may find yourself telling, I know it already. You may remember the questions that were on your NcLEX-RN® exam. Forget them! You won't see any of the same questions when you retake. Focus your energy on understanding the content of nurses. Read the NcLEX-RN® Content Review review guide. Start with your area of weakness and work towards your area of strength. If you don't understand a word or you have a question on the topic, check it out in the school nursing textbooks. Include these notes in the NcLEX-RN content review guide® content. Browse the Solutions Tree. Kaplan has developed a Solutions Tree to provide you with the critical thinking framework and clinical judgments you need to successfully answer questions at the NcLEX-RN level® exam. Commit to using tree solutions when practicing questions in preparation for NcLEX-RN® and when passing an actual exam. Watch the Kaplan test-reception workshop. These strategies do not replace knowledge of nurses, but will provide you with to properly use your knowledge of care and to correctly answer questions at the application/analysis level. Browse the classroom lessons when they're available on the website. The issues discussed are the exam style and different levels of difficulty. Discussing explanations for questions does three things: First, it gives you the right answer; secondly, it examines the knowledge and thought process that leads to the correct answer; third, it points to the wrong mindset behind the wrong choice of answers. If you are having difficulty asking a question, stop recording and ask yourself why you missed the question. The question is about the knowledge of nurses you didn't know about? Did you misunderstand the question? Have you made an assumption or based your answer on what you saw in the real world rather than the ivory tower nursing? Was it a test problem? If there's content you don't understand or don't remember, watch it. Once you're done, go back and review your notes. Do you have a full understanding of the content areas? If not, more research is needed. Practice with coaches issues. If your assessment of your previous test experience has identified problems with the computer exam format, now is the time to work out any difficulties that you have experienced when making the real thing. Use these 7 practice tests to assess your knowledge of nursing content and practice your critical thinking skills. Practice with zbank. Build your confidence by using tree solutions to answer the bank's questions. You determine the content and choose the number of questions contained in each test (75 questions). Create your savings test from all 8 areas that customers need. This will allow you to consistently continue the basic nursing content. To use your experience at the savings bank, answer questions only with a testing mode. Typically, students who use tutor mode answer more questions correctly because they review explanations before selecting answers. This, however, does not give you accurate feedback on how you answer questions. Be sure! Without planning to retake the NcLEX-RN exam® until you allow yourself enough time to prepare for the exam. Then go to the exam knowing that you are ready and ready to pass. Take responsibility for the environment. Arrange your computer keyboard and light for comfort. View the exam as a marathon and ration your energy and effort. Be prepared to answer all 265 questions. If you lose concentration, raise your hand and take a short break. Comprehensive training and positive attitude are an integral measure of success in the NcLEX-RN exam.
