Gohan Character Tips and Tricks (child): To cause a lot of damage to the enemy you can turn into Super Saiyan, be very close and run the ki wave function (clicking on the R and button), then (holding them down), it is recommended to have ki load more than 130%. His special skill (at the touch of the L button) Super Saiyan is optional, increasing the level of damage caused to the enemy by 1.25%, but lowers the energy level to 49%, in which Gohan returns to normal. NOTE: You can't execute command attacks without one Super Saiyan conversion finish. Ginyu: His Supreme Vertical Super Attack Deadly Fire (where Jeice appears) can be controlled with the direction of the arrow (during the header Crush Ball, Ginyu believes he is helpless), is his best attack after his final attack Ginyu Storm. His special ability Special Pose reduces the energy level of the opponent by 25% and leaves him stunned for a short time, ideal for counterattacks. Dr. Gero: His vertical super attacks can be used to counter enemy attacks with their wide range. Its grip (at the touch of the Y and B buttons) is very useful because it can absorb the life and energy of the enemy to turn it into its own health points and ki. Its special skill, the Absorption Barrier can absorb ki waves and blast-like super attacks, as well as restore energy, but not health points. Krilin: Your top vertical super attack Sokidan can be controlled with arrows just like what attack to Ginyu having the same consequences. His special Unlocked Potential skill increases the level of damage done to the enemy by 1.25%, but the energy level drops to 49%, where it returns to a normal level of attack. NOTE: Computer attacks cannot be performed without one exhausted due to increased force. Freezer: It has an additional super attack that is activated, starting with its capture (Y and B buttons) and then quickly pressing the R button and performing his Incarceration Ball, causing a little more damage than his Deadly Beam. His special skill 100% force increases the level of damage inflicted on the enemy by 1.5%, the enemy is constant and his ki does not decrease. NOTE: Turns off after performing a command super attack or changing characters. Team Skills When you are with a specific team and members are in good condition click the attack team button located on the lower screen, activating it brings the character closer to the enemy, and touching it will trigger a super command attack. To do this you need ki up to 200% This is a list of several attacks on the team: Gohan (child) Name: Energy Unscathed Companion: Crilin Description: both fire many bursts of energy that then hit the enemy.
