Flat paved path. Peebles Island SP Loop Trail; Moderate. Hilly, stone dust & hard-packed dirt lines. Some tree roots. Directions: To get started from Waterford Harbour Visitor Centre; Take I-787 north to Route 787 north to Route 32 (Saratoga Ave) across the Mohawk River to Waterford town centre. Turn right down 2nd St which will take you to the parking lot on your right just before the bridge. The Black Bridge Trail, also known as the Delaware Ave Trail begins at Waterford at the Waterford Harbor Visitor Center. Cross the Mohawk River to Peebles Island State Park, then cross the Mohawk River again to Van Schaick Island in Cohoes. Then follow Delaware Ave to the Black Bridge, the former Delaware & Hudson, built in the 1890s, stretches back across the Mohawk River to Green Island. I'm not sure if the other two bridges are also old RR bridges and how many trail following Delaware rail bed & Hudson. At Peebles Island State Park, guests can access the Loop Trail around the island. From the Waterford Harbor Visitor Center you can access the Old Champlain Canal Trail or connect to Uncle Sam Bikeway via a short detour on the highway. For more information visit; PEEBLES ISLAND STATE PARK. Starting from Waterford Harbor Visitor Center; The small museum is located at the top of the Visitor Center (accessed from the parking lot). Narrow lanes lead from the parking lot to the bottom of the Visitor Center along the Mohawk River and Canal Walkway. Here you will find map boards, toilets, and info centers. Notes; Heading right (west) along the Canal Walkway takes you to the Champlain Canalway Trail and Lock 2 from the Erie Canal. You can also access Uncle Sam's Bike Path from here. Go left (east) along the Canal Walkway and you will travel under the old RR Bridge. The paved road will be on your left. Notes; Before taking this path, you can continue straight along the Canal Walkway to where the Mohawk River enters the Hudson River. The map board and launch ship are located here. Follow the paved path to the old RR Bridge. The 1913 railway bridge now has one lane for cars and one pedestrian walkway. Crossing into Peebles Island State Park. Notes; On the left across the street, you will see signs and paths of rock dust. (Take a look at how they made the Peebles Island State Park Loop Trail below. Continue straight along the paved path across Peebles Island. Notes; The side lane on your left leads to a picnic pavilion and promenade overlooking the Hudson River. Come to the dark green RR Bridge after 1.2 km. Again, the old RR bridge now contains one lane for cars and one for pedestrians. You will cross another part of the Mohawk River to Van Schaick Island. Here the paved Delaware Ave Trail travels along Delaware Ave. The Mohawk River follows along your right. The line crosses the road and passes the map board at 1.8 km. The line now runs along a residential corridor before crossing Ontario St at 2.6 miles. Just passing a few pitches of football looks right to see the old Van Schaick Family Cemetery. Come to Van Schaick Ave at 2 miles. Notes; Van Schaick Park is located on this street. The line then leaves Delaware Ave and takes you to the Black Bridge at 2.4 miles. The 1890 RR Bridge is part of Delaware & Hudson RR Line. You cross the Mohawk River one last time to Green Island. Here the paved path takes you to Cannon St at 2.6 miles. This last section is new and will include a new parking space, and stalls, but I haven't checked it out. The sidewalk continues with the Cannon St. Peebles Island State Park Loop Trail: Starting with the sign next to the entrance of the old RR Bridge; Follow the trail of stone dust around the side of the brick building to the back of the complex where traces become dirt and gravel that are packed hard with the roots of the occasional tree. Continue straight at the intersection to the forest. The trail winds through the forest with several hills and many side paths. Just keep left at each intersection and you'll finally get out over the Mohawk River at 1 km. Follow the south trail along the east side of the Island and beside the river. A nice promenade overlooking the southern end of the Island. Be careful; Very steep drop. The trail now travels north along the west side of the Island. Travel along some big cliffs at 1.2 miles. Pass the bench pavilion on your right with information signs at 2.6 miles. Come to the northern end of the Island where you can see the Waterford Harbor Visitor Center across the river. The trail then turned inland. Turn left at the next intersection and this will return you to the back of the complex. Then head left to complete your loop of 2.2 miles. HH CLICK HERE FOR A REGIONAL TRAIL MAP CLICK HERE FOR A MAP SP PEEBLES ISLAND BEFORE YOU SET OUT BE SURE TO READ THE DISCLAIMER AND DISCLAIMER BIKE IT OR HIKE IT HOME PAGE The First, or South, Mohawk River Branch, Simmons Island on the right and Van Schaick Island to the left of the Mohawk River Sprouts are some of the Mohawk River channels as it flows into the Hudson River creating a delta in New York state. [1] Most of the sprouts are located within Albany County, with the northern one in Saratoga County, and sprouts entering the Hudson on the boundary with Rensselaer County. The islands formed by sprouts are, from north to south-Peebles Island,[2] Polrump Island,[3] Bock Island, Goat Island, Second Island,[2] Van Schaick Island,[4] Simmons Island. [5] and formerly Green Island. [6] The sprouts separating Green Island from the rest of Albany County were filled with the creation of Interstate 787 and NY Route 787. Henry Hudson's History crew may have reached as far as sprouts in 1609 when Hudson sent a small boat with his first mate and four crew members from Half Moon to the Hudson River to see if the river was indeed the Northwest. [6] The islands and sprouts (spuyten in Dutch) along with the land along the north coast of the northern sprouts are part of the land channel harvested to Philip Pieterse Schuyler and Gozen Gerritse Van Schaick in 1665. Native Americans refer to the area Nach-te-Nack, and by dutch settler Halve-Maen (translated as Halfmoon in English). In 1674 Schuyler ceded his rights to the land to Van Schaick, and in 1687 Van Schaick's son Anthony Van Schaick was confirmed as the sole owner through a patent title by Governor Thomas Dongan. [7] Part of the sprout is very shallow, 2 feet (0.61 m) or and makes it possible to facilitate river fording. Waterford received its name from ford connecting the village to Peebles Island, a name that became popular used by soldiers in the US Revolutionary War. [3] The Fords connecting the islands were used by local Native Americans, Mohicans and by the Dutch and English at Fort Orange and Albany en route to Montreal and Canada, used by soldiers in the French and Indian Wars. During the American Revolutionary War, the islands were the site of military fortifications that protected fortifications and river roads leading to Albany from invasion forces coming from Canada. Many fortifications were built in Peebles and Van Schaick Island, with Van Schaick House being a military base. [8] The Rensselaer and Saratoga trains (founded in 1832) crossed into Green Island from Troy over the Hudson River and then traveled north over three sprouts, crossing into Saratoga County. [9] In 1828, the King's Power Canal was built with two dams thrown across the Fourth Branch, between Waterford and Bock Island and then between Bock and Peebles. [3] The state dam between Cohoes and Waterford, located where sprouts came out of the main channel of the Mohawk River, was rebuilt 12 feet (3.7 m) east (downstream) of the old dam in 1868. Both the original and new dams are for the original path of the Champlain Canal, allowing canal boats to cross the Mohawk River into the canal channel on the other side instead of using a watway bridge over the river. The original dam was too low and the boat often crossed the edge, the newer dam 15 inches (380 mm) higher was to alleviate that problem. [10] The Fourth, or Northern, Branch of the Mohawk River that surrounds Bock Island Over the years individual sprouts have been given a different name. From north to south the sprouts are the Fourth Branch, dividing Peebles Island from mainland Saratoga County; The Third Branch, separating Peebles from Van Schaick; The First Branch separating van Schaick and Green islands from the Albany County mainland; and Second Branch, separating Van Schaick from Green Island. [11] The Fourth Branch is also known as the Northern Sprouts; and the Third Branch as the Central Branch, which is a fast location called Buttermilk Falls. [2] The Central Branch or sprouts were also referred to as White Sprouts by the New York State Assembly in 1833. [12] The name of the Fourth Branch is still used in reference to the hydropower plant located in the town of Waterford. [13] The Third Branch Center is the political boundary between Saratoga and Albany counties while the Second Branch is the boundary between the city of Cohoes and the town/village of Green Island. Green Island Islands–Before being stripped of its status as an island, Green Island was the largest island formed by sprouts. Green Island is separated from the plains of Watervliet, Colonie and Cohoes by the First Branch and from Van Schaick Island by the Second Branch, The Hudson River that separates the island from Troy. The island is part of the village and town of the same name. Van Schaick Island–A large and densely populated island with the historic Van Schaick House, a country club, the historic Matton Shipyard, a marina, an elementary school. The island is separated from the Cohoes mainland and Simmons Island by the First Branch, from Peebles Island by the Third Branch, Green Island by the Second Branch, and from Troy by the Hudson River. Politically part of the city of Cohoes. Simmons Island–a small island in the middle of the First Branch with Van Schaick to the east and the Cohoes mainland to the west. Politically part of the city of Cohoes. Peebles Island–On 132 hectares (53 ha) the largest island formed by sprouts is located in the towns of Waterford and Saratoga County. It is part of Peebles Island State Park and is home to the New York State Office of Parks, Recreation, and Historic Preservation. [3] The second–second largest island, after Peebles, from the islands of Waterford, and once called King's Island. The island is home to the Boy Scouts of America camp, Camp Kavanaugh. [3] Goat Island is located in the middle of the Fourth Branch and is owned by the state of New York. [3] Bock Island–the location of two dams, one on each side connecting it to mainland Saratoga County and to Peebles Island. It is located in the middle of the Fourth Branch and is owned by Mohawk Paper. The island measures 1.38 hectares (0.56 ha). [3] Polrump Island–located in the middle of the Fourth Branch and owned by the state of New York. [3] Recreation Peebles Island is part of Peebles Island State Park, an un developing park with recreational hiking trails and remnants of historic battle works thrown during the U.S. Revolutionary War. New York State Park, Recreation and Historic Preservation Headquarters is located on the island. [3] There is a common fishing site at the northern tip of Simmons Island.[5] and Peebles Island has a coastline fishing spot and an area where rivers can be safely waded through. [14] All fishing in sprouts is caught and released due to the presence of PCBs. [3] The former railway bridge over the Second Branch, variously referred to as the Black, Delaware, or Cohoes–Green Island bridge was renovated as part of a bike/hike line connecting the towns and villages of Watervliet, Green Island, Cohoes, and Waterford. [15] The visitor centre with a public pier is on the north shore of the Fourth Branch in the village of Waterford. There is a designated swimming area and there are individuals who enjoy river surfing. [16] See also New York Reference River List ^ New York State Senate (1849).
