With this program, you can automatically choose the music you want to play and let your speakers spin around the same music you are currently listening to. It supports such formats as MP3, OGG, AAC, WMA, and WAV. It runs on Windows 98 and Windows 2000. In terms of the ease of use and user-friendliness of the software, it is amazing. I myself was amazed with the simplicity and ease with which I used it. Once you install and start playing your music collection, all you have to do is sit back and watch your speakers, television, laptop, and whatever else you have plugged in be all over the place as they try to play your music. This is a fantastic program and I would highly recommend it for anyone who owns any kind of music player. You may have an iPod, but if you don't have a jukebox in your house, get this software and it will surely make your music playing experience a lot better. The new Visual Design in TouchJams 5.0 is now a real pleasure for those who like to see their image. For instance, you can now enter your own picture in the new "background photo" function. You can also upload your pictures from Windows Explorer (or other OS) and choose the JPEG format for them. Another addition is the new full screen-mode, allowing you to see the main window even if you have a different task on your screen. This mode is really easy to use, just click "Fullscreen" to get it and then adjust it. Finally, the program has a new option "StopPlay" which stops playing a song and creates a single button for immediate "Play Again" action. This may be handy when you want to continue listening to your favorite song, or if you want to choose your next song from the list without closing the player. TouchJams 5.0 is packed with new features, but the most important of them is that it's fully compatible with your Windows XP Media Center Edition. Besides, you can also use it to create your own jukebox using any audio files you already own. It's easy to see how things are going.

Although I had heard rumors of a lot of jukebox software on the internet, I never really paid much attention to them. But when I was asked to review TouchJams, I decided to do so as I thought that it would be interesting to test this program out. And 520fdb1ae7
