registered Anyone have a good workflow for creating CSS3 gradients? oCean_, i mean the light one lucas-arg: just check the power of the cpu - cat /proc/cpuinfo lucas-arg: on my 5200U i get about 8 - 11 plus if you have hyperthreading - a process can live on both of them at the same time - you may have more than 1 cpu SolarisBoy, oh the load is high, but its never that, 1.6 whats your load? - you may be hitting the physical limits of the cpu - cpu voltage/clock or something SolarisBoy, its i7, so if i had 2 threads each core would have 1.6? load is 100% or if you have hyperthreading yeah - thats exactly right solarisboy can i test it somehow? maybe load is more than 1 cpu - that would explain your findings lucas-arg: cat /proc/cpuinfo SolarisBoy, i already see the 1.6 and the load is 100% is the highest thread of your i7 showing? i7-2600k lucas-arg: should show what threads are at 100% in your cpuinfo .. unless your cpu is in powersave mode Luca^: in your cpuinfo you should see something like this -

if not try to set CPU scaling governors to performance if you can - i don't think you can - i'm not sure - it'll be something to do with the bios SolarisBoy, no, it didnt SolarisBoy, i dont think that is a problem with the intel lucas-arg: i saw it 520fdb1ae7
