Viper 3105v review

Viper Product Range The 3105V and 3305V are effectively the same alarm, the only difference being that the 3305V comes with the 7345V two way remote as standard. They are the first alarms in the Viper range that features ESP2. This allows for some serious customisation and allows you to personalise your alarm. It also allows the Viper SmartStart to be added to control the alarm. The other noteworthy feature is the XR Plus remote receiver which comes as standard. This claims to have a range of up to 1.5 KM, although don't expect this to be that impressive in the busy and hilly Wellington environment. XR Plus Receiver The receiver or "Control Centre" as Viper call it, contains the alarms LED as well as the valet button and is designed to be mounted on the upper part of the windscreen. Viper 3105V One way security The 3105V comes with a two 4 button remote controls which have a separate lock/unlock buttons. It also has two auxiliary outputs. Personally, I'm not sold on the remote design as the unlock and Aux buttons are very close together and it's easy to press the wrong one when not paying close attention. The only thing the 3105V lacks from the lower price 3100 is a Horn honk output, but the program options gained from the ESP2 settings more than makeup for this. The 3102V is also an option if you want horn honk and more Aux outputs. Viper 3305V Two way alarm Two-way security The 7345V two way remote is the only real difference over the 3105V, it comes with an additional one way remote as shown. The two way remote will display if the alarm is armed/disarmed, as well as inform you if the alarm is triggered as well as showing what zone has caused it to sound. It has an additional button on the back that allows the remote to be locked so you don't knock the main buttons when it's in your pocket. Aussie R's version Be warned: as NZ product options are chosen by our cousins across the ditch the 3105V is sold as a 3105VR in NZ which means it comes with an over-ride key style battery backup siren. I'm doing my best to get them with a standard siren which is how they come in the USA. It's worth noting that the 3105V does not support the 515ESP digital battery back-up siren so consider the 3102V or 3606V if you require a hidden battery back-up siren Viper 3105V & 3305V Suggested Installed Price: 3105V \$460.00 3305V \$540.00 (Price may vary depending on vehicle and requirements) None insurance standard: Suitable for vehicles with factory transponder immobiliser or low-risk vehicles Obsessive Rating: Vipers most affordable alarm with ESP2 support allows each remote control to be individually programmed. If you like a remote with a long range then you'll love this Viper OVERVIEW Features: Clone-Safe® Code-Hopping® ESP2 (No digital siren support) Hazard/Parklight output. This comes at no additional cost to you, and all the prices and availability are accurate at the time of publishing. Viper is a subsidiary of Directed Electronics Incorporated. Around 2000, Viper was introduced and since then it has been the world's best-selling vehicle alarm and remote engine start brand.The company has a high ranking among elite product publishers such as Gear4Wheels.The company uses precision engineering and the best technologies to give you features you'll love in a car alarm & security system.Viper created the first ever Smartphone control category and is leading the keyless revolution. You can trust that Viper will constantly improve and provide you with reliable products From your Smartphone, you can remotely start your car during winter or in summer; you can lock and unlock your car from a remote location.The best security SmartStart offers is the ability to track your car's location.There are two systems attached to the SmartStart series.It can either be the standard SmartStart system only, which offer these features: Keyless entry Lock and arm or unlock and disarm Remote car starterVehicle status and alerts Trunk releaseGPS SmartFence Alternately, you can opt for the more advanced SmartStart remote and security system. It has all the features of the basic version, however it has a siren and shock sensor too. This security system connects to your entire car for protection against theft.The kits include all the components you need for detection purposes. There are three basic forms to the security system:The LCD 2 wayValue 1 wayEntry level 1 way All three ranges are full alarm systems capable of detecting possible break ins. Sirens are also provided to signal movement in the sensors. A component speaker (Woofers and tweeters are installed separately variant of the R-Series speakers that are primed for heavy duty power handling and overall volume.These are the speakers you buy for a component audio system that you intend to crank out some serious wattage and volume without worrying about distortion or loss in clarity. In terms of bass performance and quality, it doesn't get much better than Alpine's Type-R series. This is Alpine's economy and replacement line, but that doesn't mean they sound weak or bad by any means.These coaxial design, soft-dome tweeter, sleek-grilled speakers are easy to install and are still built to Alpine's high standards of quality and exactitude. These are an excellent choice if you just need to replace a blown factory speaker, or you are starting to build a custom sound system for your car. Your car will have full protection all around with this entry-level Viper security system.The two remotes arm and disarm when you lock and unlock your car respectively. The remotes are embedded auxiliary and have panic mode features.There are two arming options for you to choose from. When you push the lock button for one second, you trigger the active arming.However you can program the system to lock the car automatically 30 seconds after the ignition has been turned off.A warning chirp sounds 20 seconds after the last door has been closed. 10 seconds after that, the headlights will flash to indicate the car alarm is armed. The Stringer Double Guard Shock Sensor picks up impact from the vehicle or the glass. You can program the sensitivity level. High sensitivity triggers the alarm at the lightest touch. The receiver and the remote use mathematical algorithms to change their wireless codes each time they're used. This prevents unauthorized copying of the remotes' codes that can be used to get access to the car.Failsafe® Starter KillThe alarm's control unit has a built-in relay which disables the car's start key or button. When the Automatic Engine Disable (AED) feature is on, it doesn't allow the starter to work 30 seconds after the ignition has been turned off. You need to use the remote to disable this feature.Revenger® Six Tone SirenThe siren consists of six tones in a sequence. Two of the tones can be eliminated by cutting the black or white wire loop. This results in a single tone siren. The volume can either be a full blast or 6 dB quieter than a 12 dB siren.Two 4-button 1-way remotesKeyless entry SmartStart compatible1500-ft. rangeAnti-carjackingGuarantee protection plan The remote can send commands from a far distanceCompatible with all cars. No trunk pop!There is no domelight supervision The remote start is convenient for you to cool or warm your car before you enter it. The keyless entry feature makes it easier for you to get into your car without wasting time looking and fumbling for your keys. The Viper 5305V is SmartStart compatible. With your smartphone, you have full access to your car's alarm system. The remote and your smartphone arm, disarm, lock and open the trunk. The LCD screen transmitter displays icons to inform you which security feature has been activated.The activated built in relay prevents the engine from switching on. You have to disarm the system when you want to start your car again. This prevents unauthorized driving of your car.Stinger® Double Guard® shock sensor:The Stinger Double Guard shock sensor is designed to detect impacts to the car or the glass. The sensitivity is adjustable using the rotary control on the side of the shock sensor. A light impact sensitivity generates a "warn away" pre warning siren chirp. Harder impacts trigger a full blast siren. Auxiliary output:The Viper 5305V has four auxiliary channel outputs which can connect to features found in modern cars. These include trunk release, opening and closing of windows and sunroof, the audio system, and headlights.Nuisance Prevention Circuitry (NPC):This circuitry prevents annoying repetitive trigger sequences due to faulty door pin switches or environmental conditions such as thunderstorms. If the alarm triggers the same sensor three times within an hour the NPC bypasses the detectors.1/4 mile range On-screen user interfaceStatus LEDRevenger® six-tone sirenKeyless entry The multi-car control lets the remotes connect to four vehicles You can choose the sensors you want to activate Not compatible with manual transmissions No anti-carjacking features The entry-level security system protects your car. It features all the sophisticated technologies found in all Viper products.The two auxiliary outputs let you connect the remote to two different vehicles. The Viper 3106V has an optional remote start feature. When you connect it to the SmartStart products you have full control of your car from your smartphone. The control board has full access to your car's computer circuitry. When you exit your car the comfort closure feature will automatically roll up your car's windows.Stinger® Double Guard® shock sensor:The sensor detects tampering on your entire car. You can adjust the sensitivity of the impact felt. When the shock sensors are adjusted it can give off a warning signal for a light tap. The sensors will trigger a full blast alarm.Control center:The newly upgraded control center of the alarm system ensures all features are optimally running. The RF antenna, status LED and the control button to engage valet mode or emergency override are all controlled by the center.Encryption:The alarm system has a 66-bit code encryption to prevent remote code cloning and grabbing. Codes are changed every time the remotes are used. No codes are repeated.Two 4-button 1-way remotes1500-ft. rangeKeyless entry Failsafe starter kill Anti-carjackingGuarantee protection plan Neo revenger six-tone siren Parking light alarm response The remote can unlock the doors from a far distanceThe Viper 3106V has all the features you need for ultimate protection No domelight supervision and trunk pop features The remote can serve as a universal replacement for other Viper security models The two-way system safeguards your car and the assets inside it from thieves. You can feel safe because the LCD will report your car's security status. The starter killer prevents criminals from hotwiring your car. For the ignition to turn on again, you'll need to deactivate the command from your remote. The siren gives a warning chirp in case intruders are tampering with your vehicle. If they don't stop, the siren blasts a loud sound. The Viper 7341V and 7145V serve as replacements for 2- and 1- remotes respectively.You may not necessarily be able to distinguish it, but if you have a trained ear or you are picky about your car audio, these may not be your best choice.The receiver and the remote controls change their codes each time they're used. They do this by means of mathematical algorithms. No two codes will ever be the same.XR Plus:The remote and control units utilize Viper's exclusive XR plus technology. With the use of a separate log in antenna, the range expands to 1,500 ft.Silent mode:The silent mode temporarily disarms certain chips. The warn-away response impact is deactivated. However, if the car is heavily tampered with the sensors will still trigger a full blast alarm.Three-channel security system Keyless entry Parking lash lights Comfort closureRevenger six-tone siren Shock sensor Two auxiliary outputsVehicle recovery system The system has power saver mode which drops the current drawn from the car's battery The ignition switch position is monitored and if it's turned the alarm is automatically triggered There is no trunk pop and dome light supervision The sensors are not sensitive as they should be I hope I have delivered a thorough, honest review of Viper Car Alarm Systems, with which you can choose the option that better fits your needs.
