ink com 1.3 In this article, the search of the eclipse 4 lunar eclipse in march 2012 for the first time with my homemade equipment. The whole process started at the perfect conjunction of mars and Saturn on the 23rd february. Its rare to find such a perfect conjunction, but I knew that it was the time to start my project. While Saturn is the ultimate king of astrology, Mars is the ruler of my country. I like their perfect conjunction to help me on my projects. Its not only the perfect conjunction, but it's the first time I find such a perfect configuration in my sky. The total solar eclipse is the most beautiful phenomenon for me since I born. It's a huge black circle in the middle of the sky. While the moon's shadow cover it, it have a special strength that I like to protect it. I will keep the moon from the sun, and keep the sun to the moon. I would like to have the powerful configuration to make something incredible! To find the perfect conjunction, I started to look for the places where I can observe the sky all day long. The main difficulty was to find the perfect time to observe the eclipse. The longer the best time to observe the eclipse, the more possibility of loss of the sun and the moon, and so on. In the case of solar eclipses, the moon's shadow passing over the earth can block the sun completely, and make the sun not to shine. As for lunar eclipses, the eclipse is just half of the moon, and the moon's shadow is not so big. I hope that the best time would be around sunrise. At the end of january, I had a major internet failure for many months. It's not the first time, and I lost all my precious contacts in the internet. I was really feeling like I will not be able to connect my electronic life with the new life! I was in despair. I was really thinking that I will not be able to make anything for the lunar eclipse. However, it's an opportunity for me to test my homemade setup with the new equipment. After some hesitations, I finally decided to give it a shot, and I found a lucky day! The beginning: To make an eclipse, the first step is to find a place. The best place is usually the mountain, like Tohoku 520fdb1ae7
