Designing data intensive applications martin kleppmann pdf

I'm Dr. Martin Kleppmann. I do various things: I am a Senior Research Fellow and An Affiliate Lecturer in the University of Cambridge's Department of Computer Science and Technology, funded by the Leverhulme Trust early career fellowship and the Isaac Newton Trust. I'm working on software to work together at the local level and to secure distributed systems. I am also a research fellow and director of computer science research at Corpus Christi College, Cambridge, where I participate in student education. In 2017, I published a book for O'Reilly, called Data Intensive Applications. It covers the architecture of a wide range of databases and distributed data processing systems, and it is one of the best-selling titles in the publisher's entire catalog. I go to conferences regularly, and I've seen more than 150,000 times. I've worked on a variety of open source projects, including Automerge, Apache Avro and Apache Samza. From 2007 to 2014, I was an industrial software engineer and entrepreneur. I co-founded Rapportive (acquired by LinkedIn in 2012) and Go Test It (acquired by Red Gate Software in 2009). I composed several pieces of music, including Die T'rne des Februar (in German), a musical and dramatic adaptation of The Tonka Dragta, which premiered in 2007 with a 150-person cast. Feel free to contact me. Recent blog posts Are Things I've written recently. The main old articles that have remained popular. The Conference is about the events at which I will speak or speak.
