Mental retardation types pdf

The definition most commonly used in the United States is from the American Association for Mental Retardation (AAMR). Mental retardation is defined as an intelligence of approximately 70 or below, consisting of serious limitations in both intellectual functioning and adaptive behavior as measured by standardized tests. Adaptive behavior is defined as the collection of those skills necessary for an individual to perform within the social and physical environment. Mental retardation is a lifelong disorder. The severity of the disorder can be measured by the degree of limitations in both intellectual functioning and adaptive behavior. The severity of the disorder can be classified as mild, moderate, severe, or profound. The mental retardation classifications are based on the results of standardized intelligence and adaptive behavior tests. The definitions used for mental retardation are based on the results of standardized intelligence and adaptive behavior tests. The definitions used for mental retardation are based on the results of standardized intelligence and adaptive behavior tests. The definitions used for mental retardation are based on the results of standardized intelligence and adaptive behavior tests.
