Subclavian artery thrombosis is a rare condition in childhood that is generally the result of an underlying systemic vasculitis. We present a case of a child with a thrombosed right subclavian artery with complete heart block, who was successfully treated with recombinant tissue plasminogen activator (rt-PA). This is a rare report of a thrombosed right subclavian artery and successful treatment with rt-PA in an infant.Emergency response to a series of fires in an apartment complex on 520fdb1ac7
