## Jbl charge 3 manual buttons

After unpacking, the JBL charge 3 was more than what I expected from a portable Bluetooth speaker. Measuring just over 8 inches long and 3.5 inches tall, it is a sturdy speaker and charge station. JBL Charge 3 is equipped with a 6000 mAh power pot and a usb port to charge devices on the go. Picture: Charles Poladian/Mashable While it's not the most portable speaker around, there's a lot to appreciate about the JBL charge 3. It's sporty decent, but not great, sound quality and there are a lot of features that you'd expect from a Bluetooth speaker retailer at \$150. Just make sure you save some space in your bag for it, JBL Charge 3 reminds me of a footlong sandwich. It's not something you can hear about Bluetooth speaker, but stay with me for a second. One hefty speaker is a good sandwich nails the ratio between meat, cheese, toppings, seasonings and bread. It's in harmony and you can hold it in your hand, snack, and stay relatively clean. Too much of anything and then some things start to spill and you either have a salad on the floor or mustard on your face. It's still a portable, portable sandwich, but it's not as functional or satisfying as the golden sandwich ratio. Bass radiators on JBL Charge 3 can really pound things. Image: Charles Poladian/Mashable This too big sandwich experience is what the JBL charge 3 reminds me of. It fits in my hand, but it's kind of spilling, too. It's definitely portable, but it also weighs about 1.7 pounds - as much as some laptops. You can't really hang it off the steering wheel of your bike or clip it on your backpack. Yes, it's portable, but definitely at the opposite end of the spectrum than, say, JBL Clip 3. And it's not necessarily a bad thing. Sure, there are a lot of lightweight, waterproof Bluetooth speakers out there, but can they also charge your phone? This is a great feature to have, although it adds to the total weight of the JBL charge 3. JBL Charge 3 performs admirably as a Bluetooth speaker and charging station. There are also many features you need and expect to make a portable bluetooth speaker stand out from the competition. Features galore the oblong speaker has buttons on top, a sturdy mesh look, and bass radiators on the sides (more on that in a moment). The speaker sits on a rubber pedestal that includes LED lights. There are a lot of dots on this pedestal, so let's start there. Image: CHARLES POLADIAN/MASHABLE, equipped with a 6000 mAh power bank, JBL Charge 3 can theoretically only be used as a charger and fully charge the iPhone 7 twice before it needs to be recharged. The speaker itself takes 4.5 hours to fully charge, and the playback time is about 20 hours, depending on usage and volume. Opening the charging valve mini-USB input, USB output, and and aux entrance. All the JBL Charge 3 buttons are at the top of the speaker, raised, so you can control them to the touch. The JBL Connect button lets you connect multiple Charge 3 speakers. You can skip songs by clicking the Play/Pause button twice, but there is no way to go back. So, if you want to hit a repeat on that summer jam, you'll have to do it with your phone or steamed device. JBL Charge 3 has features on top of features. We've already talked about battery, but it's also waterproof and can be submerged in 3 feet of water for up to 30 minutes. It's practically a necessary feature to go to portable speaker these days, especially one that retails for \$150. Image: CHARLES POLADIAN/MASHABLE Although it is not tested by the drop, there are many rubberized components to avoid being labeled as fragile. The sturdy fabric of the face looks beautiful and can withstand round or three in the park or in the mud. Open bass radiators are basically a cosmetic feature, so you can see the low end in action. We'll talk about actual bass soon, but it's a bit of a flash that doesn't impress me much. It's a neat first time, but you're probably using Charge 3 at a party or in a large group, so it will basically go unnoticed. Since the bass radiators are outdoors, there is the slightest chance that you can throw it in just the right (or wrong) way to damage them. There are rubber notch that give the radiators around the nanch pillow, so you also have to be very lucky what happens. These are things I have to think about because I dropped my phone on a rock and cracked my screen early, so I know the odds are always not in my favor. There are even more features when you use the JBL Connect app. I am not a huge fan of these apps because they are either infertile or too clunky for their own good. There are some useful features and updates in the app to make it worth downloading, but I'm still not a fan of these apps. You will probably install the firmware update, as I did, before you can get started with the app. In the app you can choose party mode in pairs of up to 100 (!) JBL Connect compatible speakers or select Stereo Mode to install two JBL speakers as left/right channels. Tapping the customization wheel opens up other features in the app. You can switch between Play/Pause to control music or activate a voice assistant, current Siri support or Google Now by clicking the Play/Pause button. You can also turn the charge 3 into the loudspeaker and turn off the sounds of audible feedback. And, if you're personalizing, you can change the title of Charge 3 to something like 'Charles' Sound Machine, if you're so inclined. All about that bass 3 booms. It's a battering ram that lets you know that he's here to party. JBL highlighted bass with charge 3 and it's definitely definitely in this department. You can hear, feel, and even see how much bass charge 3 packs thanks to those exposed bass radiators. Image: Charles Poladian/Mashable However, while the speaker is playing loudly, and the bass will certainly satisfy, the overall sound quality is only fine. I never stopped to admire the mix or found myself getting lost in the details of the song. Songs sound as it should, but there is no real wealth or warmth. Great speakers invite you into music and create that one-to-one connection with the listener. You may be in a packed party, but you can't help but get lost for a second in the chorus of the song. We've all had that experience, but Charge 3 comes a little less in this department. However, bassheads will certainly love how much this portable Bluetooth speaker strikes. In the bright red shell it is difficult to question the usefulness of the JBL Charge 3, as it is both a portable Bluetooth speaker and a charging station. I appreciate its overall weight, even if it means making a little space in my bag. Like a summer or party speaker, there's a lot like having a charge of 3. It's waterproof, can be paired with multiple JBL speakers, and can double as a loudspeaker if you just happen to need to take a call in the pool. Overall, JBL 3 charge is a versatile device that works well as a party speaker and looks part, too. However, generally fine but not exceptional, the sound keeps the JBL charge 3 off really standing out from the crowd. The waterproof JBL Charge 3 speaker features multiple buttons and lamps on top, as well as battery-condition headlights throughout the front deck. The power button lights up in white, blue or both to show the status of the Bluetooth speaker. There's also an access panel to the port in the back, which hides the USB charge in and out, as well as ancillary (AUX) in the ports. But here, we offer our JBL charge 3 button guide. We'll show you where the control buttons are on the speaker, what each button does, when to press them, and how to use them in general. JBL Charge 3 Buttons Guide Features, Descriptions and Location Bluetooth Discovery Mode Button There is one row of buttons on JBL Charge 3. Each button in this line has a unique shape. First, we have a Bluetooth detection button, next to the left side of the top of the speaker, as indicated on the green arrow in the next picture. Notice its squiggly shape. As you use the Bluetooth pairing button you will need this button anytime you pair the JBL charge 3 with never-before-paired Bluetooth buttons. So with this wireless speaker on, click this button to put this Bluetooth speaker into detection mode. When detected/paired mode, Charge 3 transmits its name and other connection information through Aether. This allows other nearby Bluetooth devices to detect and to him. JBL Charge 3 wireless speaker with its Bluetooth Discovery Mode button highlighted. JBL Charge 3 buttons. The volume down and up the JBL Charge 3 button also has volume controls. Near the center of the speaker near the Bluetooth button, the volume buttons are in the form of minus and plus characters. When pressed, they reduce and increase the output of the speaker by reducing or increasing the volume setting on the source Bluetooth paired device. See the Volume Down and Up buttons that the green arrows point to in the following picture. As you use the volume buttons with JBL charge 3 in pairs and playback, click minus the form to reduce the level of sound output from the speaker. Click plus-shaped to increase the output of the sound. Note that the volume controls have no effect when the speaker is not paired. In addition, the volume setting can vary from a paired device to a paired device. That is, each pair device remembers its own volume setting. So you may have to adjust the output of the sound when you unpair the speaker from one Bluetooth device and pair it to another. The JBL Charge 3 speaker, top view, with dedicated Volume UP and DOWN buttons. The Pause Play/Pause button is shaped like the right arrow and is next to the right side of the JBL 3 charge as indicated on the green arrow we drew in, in the following picture. How to use the Play-Pause button Click on it to pause the sound playback. Click again to resume sound playback. Please note that this is not a mute button. That is, pausing playback thus suspends the playback of the sound on the source Bluetooth device to which this speaker is currently paired. When streaming, the stream is suspended. This way, you won't miss a single content when the speaker pauses, as the source device (your phone, tablet, or computer) remembers where the content was suspended. So it resumes playback in that location when you press the play pause button again. Paired with an Apple device, click the Play/Pause button to get Siri's attention. Please note that Siri must be enabled on the original device (phone, tablet) for this feature to work. JBL Charge 3 waterproof portable speaker. Show a dedicated Play-Pause button. The Power Power button not only turns JBL Charge 3 on and off, but also contains multicolored light to indicate the state of the speaker when turned on. How to use and interpret power button signals quickly press and release the power button to turn on the ON speaker or OFF. In addition, the power button lights up in different ways to indicate different states of speakers. First, it flashes color when the speaker has not yet been paired, and is in Bluetooth detection mode. It glows solid blue when the JBL Charge 3 is being successfully paired with a Bluetooth source device. See this blue glow in the next picture. JBL Charge 3 Bluetooth speaker, powered by, not paired. Pair. The glowing white power button is highlighted. The power button glows solid white when the speaker is currently not paired and is awaiting a pairing request from the Bluetooth source device. See this glowing white button in the previous picture. Finally, the Power button glows pale blue and white while the speaker folds. The JBL Connect' The Connect Plus button is used to connect two or more compatible JBL Connect speakers in party mode, so they all play the same audio content. As with speakers participating in Amazon's multi-100 music groups, all speakers participating in Connect are synchronized. That is, they all play the same sound at the same time. How to use the Connect Plus button, you press this button on every Bluetooth speaker you want to add to the Connect group. JBL Charge 3 button layout guide. JBL Charge 3 Power Bank Speaker. Display a dedicated -Connect Plus button. The image above shows a JBL 3 charging that is not participating in Connect because the Connect' button is dark. However, the Connect' button lights up when the speaker is connected to the Connect group. JBL Charge 3 Buttons Combination Codes Reboot Button Combination You can reset JBL Charge 3 on factory default settings and state by clicking on that UP and Play/Pause buttons at the same time and holding them until a hard reset occurs. See these yellow buttons in the following picture. You may want to reset the speaker to correct any erratic or strange behavior that you see from it, such as inability to pair, distortion of sound, failure to turn off when pressing the power button, and so on. Please note that the reset seems to invalidate any stored information about connecting to this speaker on the source Bluetooth devices. So you'll have to forget these connections and re-pair the speaker after resetting in order to play audio content through it again. JBL Charge 3 button layout guide. The JBL Charge 3 IPX7 speaker showing the dedicated Volume Up and Play Pause buttons. Serving only button mode Combination When in this mode, JBL Charge 3 is not turned on unless you connect the external USB power source. And then, it feeds without pressing the power button. Also, you can't turn it off in this mode unless you turn off the external power supply. Also, none of the buttons seem to work in this mode. The speaker will not be paired with any devices or other speakers, and as mentioned, the Power button does not turn off. To enable this mode, press the Connect and Volume UP buttons at the same time until the speaker powers off, usually taking ten seconds or so. You can enter this mode as long as the ON speaker, and it doesn't matter whether it's connected to the external power or View from above the JBL Charge 3 speaker showing the buttons -Connect - and -Volume UP-highlight. But to turn it off is You have to connect USB power, since the speaker won't come without it. Then, with the power button glowing, press and hold the connection and volume of the UP combination button for ten seconds or so until the power supply is off. This brings the speaker back to normal. JBL Charge 3 Battery Status Lights Gage This speaker is also equipped with numerous lights that show Bluetooth pairing status, power, and, the amount of charge currently built into the power bank battery. As read the state of the Gage battery When the internal battery is full, all five battery level lamps glow white. As the power bank discharges, fewer lamps glow. In the next image, the speaker is displayed at between 60 and 80 percent of the charge. Please note that four lamps are lit in this situation. JBL Charge 3 button layout guide. The JBL Charge 3 Bluetooth rechargeable Gage battery condition speaker is eighty percent of the full charge. As the battery further discharges, more battery level lights go out, until the amount of charge reaches between 0 and 20 percent. In this case, only one lamp glows, in the last picture on the left. Finally, when the battery discharges to a critically low level, the far left battery light flashes. Turning off the speakers is inevitable when it happens. So refill it immediately for further musical pleasure.
