If your phone has been lost or stolen and you don't have any installed tracking apps, you can now find your Google mobile phone thanks to its free Android mobile service. The telecommunications giant provides you with a website where you can see your phone in real time and an app to search your phone from another device. How to spy on your mobile locator Initial Settings Although all Android operating system terminals can use a free Google tool, multiple premises are needed for the service to work properly. Older phones there are many smartphones that do not have immediate access to location features. Typically, new mobile phones already have a widget at the top of the screen to enable GPS location. If in your case your phone doesn't have this option, follow these steps: Go to the Google Swipe Settings button until you find the Location Option Acciona tab is off and click Share Location with Google Select The first option to activate your location Now you can track your cell phone with Google New Mobile accounts in which case the procedure is very simple, just swipe the top menu of the mobile phone until the shortcuts appear on the image. Touch the Location feature so your device is connected to Google through your Gmail account. Searching your cell phone on Gmail Tracking your phone on Gmail is very simple, from a Google account you can find any number of devices related to it. You will see them all on the map on the portal. Here are the steps to see your phone in real time: Go to the official site for Android Enter email and password (the one which you are active on a lost or stolen mobile phone) You will instantly see your terminal on a map located if you have an active location Use 3 features to communicate with a lost cell phone Video find the mobile phone number google Maps to search mobile Gmail Basic features It's all commands that you can perform to communicate with the lost device thanks to Google Maps loc: Find Google cell phone on the map This is a feature you have to find the device. It would kind of like placing a mobile phone on Google Maps, although the interface is different. When your terminal appears on the map, a notification similar to it will arrive: In addition to being able to find android mobile Gmail, that warning message can have a deterrent effect for the thief. So you can feel localized (this is really the case) and it's very likely to get rid of the phone quickly as well as the current function of knowing how to cell phone in real time. Activate the sound After pressing this button it will automatically trigger the alarm at full volume on your phone, even if it is in vibration or silent mode. Possible uses of this feature: You know that your phone is nearby, but you can't find it, you turn on the sound and you quickly discover it someone has it near you, you scare it, and you can restore the device to activate the lock by clicking on this option you will completely lock the phone so that no one can use it and you can also write a text notification that will be visible to the person who has his mobile phone. Possible uses: Fast-creating a password template in case you haven't tuned any lock pattern, password or contact screen alert type alert please return my cell phone, or if there is no intention to return it you are, the police is on the way to a full lock of the device, no one can access the internal files Activate data removal Recommended to use this option in case there is no way to recover the mobile phone. This erases all data on the device, all media files, contacts, SD cards, calls, messages, apps and shared logs. In case you activate this option and the mobile phone does not have access to the Internet via Wi-Fi or mobile data as soon as you have access to erase order will be activated remotely. If you want to use your phone again because you have restored it, you will need to re-enter your Gmail account details. However, this measure will protect you from any information theft and keep your privacy safe. Find a Google mobile phone (app) In addition to the website that you have seen, you also have the ability to download a tracking app called Find My Device to track cell phone. This app can be used to search your mobile phone (Google lost mobile) through another mobile terminal. To get it very easily: With another terminal (from a friend or family member) access Google Play In the type of search party find your cell phone or find a mobile phone on Gmail /device Notification, which has millions of downloads and the developer is the official company Google Inc. In the mobile version of the app has 10 million downloads and a good rating (called Find My Device) You can download it from here Continue to install and agree to share information Enter Gmail account that you are associated with a stolen or lost cell phone you put the password of your Google Account Track mobile phone with Google, in case the location is not active. The place where it appears with the connection Use features that have been explained above to communicate with your cell phone phone As tracking a free mobile phone online We showed you how a free cell phone tracker works through Google, however, we want to offer you more solutions to know how to track your mobile phone number online.
