How I can install it? A: your problem is that you're still in windows 7. when you try to download this package, you will find it's not for windows 7. It is for windows 8 and above. You have to update to windows 10 to get the newest version of chrome Q: Check if directory exists in URL or relative path? Let's say I have a file file.extension in a directory with the following structure: folder1/ folder2/ file.extension folder3/ Is there a way to check if a file exists in either a relative path like that example, or if a file exists in the URL? file.extension If this directory is in a form I can check if it exists as so: if(count(\$_GET)=='my_directory') { echo "a directory exists"; } else { echo "a directory does not exist"; } You can use pathinfo() to find out the actual file path of a given URL. \$pathinfo = pathinfo(\$_SERVER['REQUEST_URI']); It will return an array like this: array('dirname' => '/path/to/your/directory', 'basename' => 'file.extension', 'extension' => '.extension',) So, in your case, you can do something like this: if (isset(\$pathinfo['dirname']) && (\$pathinfo['dirname'] == '/my/directory')) { // file exists in the relative path // file does not exist I hate using certain points of attack. Yeah, I know. Weakness is weakness. But sometimes its just so easy to beat someone and you get nervous when they block that one flashy fireball. I am learning to move away from using certain attacks, just because its easy to be a button masher. I try to work on my new abilities and always be ready for their unique counters, but I am trying to avoid just button mashing through 520fdb1ae7
