It's also fast, because it's rechargeable. Playstation 2 Controller Charger Hack. At last, you have a really cheap charger for the PlayStation 2 controller! You can charge it when you play Xbox or PC (if you [...])Fluorescence analysis of the development of chick limb buds. Chick limb buds were dissected and incubated in solution containing trypsin for 1 h at 37 degrees C. The freed cells were then removed from the surrounding tissue by gravity and centrifugation. These cells were transferred to a solution containing fluorescent antibodies against chick cytokeratins and allowed to adhere to a plastic substrate. The adherent cells were then fixed and viewed by fluorescent microscopy. The earliest expression of immunofluorescent cytokeratin appeared at approximately the time the chicken embryos turned 9-10 days of incubation (E9-E10), increasing thereafter until the final expression was achieved at approximately E11. During that same time period, cells of the ectodermal layer which had been freed from the surrounding tissue also began to express cytokeratin. The expression of cytokeratin in these cells was similar to that found in the original, undisturbed limb buds and suggested that they were in close contact with the original ectoderm. Cells of the dorsal ectoderm, which were freed from their surroundings, also demonstrated expression of cytokeratin in a similar manner to the original ectoderm. This expression appeared at approximately E9 and increased until the final expression of cytokeratin at approximately E11. Cells of the mesenchymal tissues did not demonstrate cytokeratin immunofluorescence.Q:

Does sbt download and compile, or only build and test? I want to run a small program that does just one thing. I started with something like this: build.sbt: name := "myprog" version := "0.1" scalaVersion := "2.9.1" ... test.sbt name := "myprog-test" Now in my terminal I did this: sbt clean package sbt compiled and packaged my program. sbt test This is OK, my program is now ready for testing. Now I changed my program and recompiled. s 520fdb1ae7
