

AUG 21st– AUG 24th

DIVER DASH LOCATIONS: Sites 3, 5, 8 and 9

See Map Attached

DASH INSTALLATION: The TKPOA has contracted with Hiuga Dive Company to implement two of the Group B methods – Bottom Barriers (BB) and Diver Assisted Suction Harvesting (DASH). DASH will be conducted in Sites 3,5,8 and 9 from August 21st through 24th.

CMT YEAR 3 UPCOMING VOTE: The future of the weeds and water quality in the Keys Lagoons will be decided in an upcoming membership vote. Whether the CMT will be funded through the normal assessment or continuing our commitment to this three-year test is key in informing and shaping the large-scale solution to bring the Keys back to its original ecosystem. If we want to restore our waterways, we must go through the process as planned. It is vital we maintain our long-term relationships and partnership with local agencies, like TRPA and the League, as they have been a huge resource on the project so far. We will provide more information on this vote in upcoming e-blasts, on our website, and in the Keys Breeze!

Please contact the TKPOA WQ department for additional information or to answer any questions about work being done on your waterways.
