

ATV SAFETY INSPECTION CHECKLIST

- Read and understand the manufacturer's manual and guide for safe operation.
- Ensure your regular maintenance is up-to-date.
- Check that your fuel tank is full.
- Verify the oil is clean and topped up.
- Inspect tires for proper air pressure and excessive wear.
- If a track is present, ensure it's aligned and in good shape.
- Confirm your safety gear is in good shape.
- Stock up your emergency kit. Consider a fire extinguisher or shovel.
- Have a tire repair kit packed and ready to go if needed.
- Inspect footrests, cables, and lines for good repair.
- Ensure there are no loose objects or items that might get tangled in the wheels or axles.
- Confirm all of your lights are working.
- Ensure the handlebars turn the full range without resistance.
- Verify the throttle runs smoothly regardless of handlebar position.
- Test brakes for proper function at various speeds.
- Check to ensure that the engine stops when the tether is removed if tether is present.
- Listen for any engine knock on startup, running and shutdown.
- Check all visible lines for fluid leaks.
