The film includes MP3, AC3, 1.0 & 2.0 subtitle formats. Quality of the movie is an absolutely superb work by the technicians. Thank you for sharing to support the author his effort in you. This is a dual audio movie and available in 720p & 480p qualities. The film includes MP3, AC3, 1.0 & 2.0 subtitle formats. Quality of the movie is an absolutely superb work by the technicians. Thank you for sharing to support the author his effort in you. This is a dual audio movie and available in 720p & 480p qualities. The film includes MP3, AC3, 1.0 & 2.0 subtitle formats. Quality of the movie is an absolutely superb work by the technicians. Tumor cytotoxicity of 131I-FIAU encapsulated in PLGA microspheres. The anti-tumor activity of 131I-FIAU (5-(fluoro-2'-deoxyuridin-5'-yl)-2'-iodo-2-deoxyuridine) encapsulated in poly(DL-lactide-co-glycolide) (PLGA) microspheres was evaluated in mice bearing DBA/2 lymphoma (LY) tumors. The short-term efficacy of this agent was determined by measuring the tumor growth delay (TGD) and tumor necrosis percentage (TNP), the long-term efficacy by tumor growth inhibition (TGI). There was a clear dose dependence for both TGD and TNP, with a dose of 25 mg of microspheres containing 1.2 microCi 131I-FIAU/kg corresponding to an average of 10 mg (dpm)/kg injected of 131I-FIAU. In addition, a dose of 25 mg of microspheres containing 3.6 microCi 131I-FIAU/kg corresponded to an average of 20 mg (dpm)/kg injected of 131I-FIAU. The TGD and TNP were comparable with 131I-FIAU at 25 mg/kg (0.9 and 21%, respectively) but, at the same dose, were lower for 131I-FIAU-PLGA microspheres than for 131I-FIAU (7.2 and 24%, respectively). The therapeutic efficacy of the 131I-FIAU-PLGA microspheres 520fdb1ae7
