Application of variational mode decomposition and chaotic grey wolf optimizer with support vector regression for forecasting electric loads

Zhang, ZC and Hong, WC

Sep 27 2021 | KNOWLEDGE-BASED SYSTEMS 228

Accurate electric load forecasting is critical in guaranteeing the efficiency of the load dispatch and supply by a power system, which prevents the wasting of electricity and facilitates energy sustainability. Applications of hybrid intelligent computing methods and swarm-based al ... Show more

Short term load forecasting based on feature extraction and improved general regression neural network model

Liang, Y; Niu, DX and Hong, WC

Jan 1 2019 | ENERGY 166, pp.653-663

Along with the deregulation of electric power market as well as aggregation of renewable resources, short term load forecasting (STLF) has become more and more momentous. However, it is a hard task due to various influential factors that leads to volatility and instability of th ... Show more

A hybrid approach for forecasting ship motion using CNN-GRU-AM and GCWOA

Li, MW; Xu, DY; (...); Hong, WC

Jan 2022 | APPLIED SOFT COMPUTING 114

The motion of a ship, which has six degrees of freedom, is a complex nonlinear dynamic process with variable periodicity and chaotic characteristics. With the development of smart ships, modern high-precision equipment needs the help from high accuracy of ship motion (SH ... Show more

Forecasting short-term electricity load using hybrid support vector regression with grey catastrophe and random forest modeling

Fan, GF; Yu, M; (...); Hong, WC

Dec 2021 | UTILITIES POLICY 73

This paper develops a novel short-term load forecasting model that hybridizes several machine learning methods, such as support vector regression (SVR), grey catastrophe (GC (1,1)), and random forest (RF) modeling. The modeling process is based on the minimization of both SVR ... Show more

Applications of random forest in multivariable response surface for short-term load forecasting

Fan, GF; Zhang, LZ; (...); Dong, SQ

Jul 2022 | INTERNATIONAL JOURNAL OF ELECTRICAL POWER & ENERGY SYSTEMS 139

Accurate load forecasting is helpful for optimizing the use of power resources. To this end, this
