## Real environment xtreme 4

Fighting modeling apps for Microsoft Flight Simulator, Flight Simulator X, FSX:Steam and Lockheed Martin Prepar3D worldwide AIRPORTS HD Photo are real global airport textures, graphics and custom 3D airport vehicles created with high resolution photos. Set up and transform over 24,000+ airports instantly with one click! SKY FORCE 3D Sky Force 3D adds a true dimension and increases atmospheric immersion thanks to its complete overhaul of the SDK cloud model, weather, textured graphics, environmental impacts and weather ambient sounds. ENVIRONMENT FORCE On the fly dynamic habitat and atmospheric utility. Includes real-time automated texture sync technology and an advanced real-time shader processor and in-sim interface for real-time customization. [FSX] - [P3D] - REX - Real Environment Xtreme 4 Texture Direct | 6.05 GB We are very happy to introduce you to REX4 Texture Direct HD! REX Texture Direct is a new integrated global texture utility and additional effects for Microsoft FSX, PREPAR3D v1.4 and v2 and is compatible with DX9, DX10 and DX11! REX Texture Direct uses the new basic PREPAR3D v2 features, while boosting both FSX and PREPAR3D v.1.4 to never-before-see height. Compiled from years of feedback from current REX users, all facets of the app include the desired features, effects, sounds and textures. Designed for low and high-end systems, REX Texture Direct consists of more than 16GB of material ranging from standard resolution to high definition selection. Current REX users recognize the realism and quality synonymous with REX in the new program. Accuracy is much more inherent in higher output material definitions and gives the highest end-of-quality result, even with lower resolution settings. Texture Direct also has the latest technology and the latest features for a dizzying experience. All new textures and effects ... more than 16 000 files, most of which have advanced algorithms. Direct's texture has a large, easy to use user interface, and setting the texture lightning fast! The user has the ability to select and set textures individually and/or create their own themes to instantly install a complete set of textures. Powerful new thematic protocols: local, weather or community, where users have the ability to share texture sets (themes) with others using REX Texture Direct. Users can choose weather scenario codes or airports to have textured themes based on weather conditions, no matter which weather two is used. There is also an object that will automatically start the simulator after the texture of the injection. You can easily switch between Simulator (FSX, P3Dv1.4 &amp; P3Dv2) and is fully capable of the network. The built-in system notification area advises you on critical app feedback, alert updates, or shared topics. Checking for updates is now easy through the settings screen. Powerful rear end technology is the basis for a new theme-driven cloud center in Texture Direct. Here you can take control of three types of thematic protocols: MY THEMES – Allows users to control the creation or automatic creation of textures based on themes. The user can store, install, delete or share these themes with other REX users around the world. COMMUNITY THEMES – Allows users to use the new system to evaluate topics, thus interacting with other users for a roadmap to success. Records are stored in banks and can be accessed by simply navigating or filtering database results, as well as using a search utility. WEATHER THEMES – a new concept using the intelligent protocol synopsis. The user selects the desired location of the ICAO code, and Texture Direct will receive the current METAR, which in turn generates a graphical synopsis based on the results. REX then generates textures based on this review, no matter what weather two is used. Again, from here you can save or share these terms with the rest of the REX user community through cloud servers. Installing textures in the simulator lightning fast, in most cases this process takes less than 5 seconds to load a complete set of replacement textures! PARTIAL LIST OF FEATURES AND IMPROVEMENTS All new textures and effects ... more than 16000 files! (16 GB) Intelligently synchronised texture engine works side by side with REX4 Weather Direct and REX4 Architect Advanced algorithms Large, easy to read user interface Lightning quick texture installation Ability to select and install textures individually and/or create custom themes to install a complete set of textures instantly Powerful new thematic protocols: Local, Weather or Community, where users have the ability to share texture sets (themes) with others, using texture direct rating system for common themes The ability for users to select a weather scenario or enter an airport code to have textured themes based on weather conditions, no matter what weather engine is in use The ability to automatically run the simulator after the texture of injections Easily switch between the advantages of the simulator (FSX, P3Dv1.4 &amp; P3Dv2) Network capable of In-app system notifications Check for updates feature built-in DX9 , DX10 and DX11 compatible New unique types of cloud base structures Low / Intermediate 3D cloud, including Stratus, Cumulonimbus, Cumulus, Stratocumulus, Altostratus and Altocumulus High-level clouds including Cirrus, Cirrostratus and Cirrocumulus 14 types of zipper: IC, CC and CG World Tropical Water Classification Fix, eliminating the repetitive effect of tile texture. Water boundaries combine much more realistic water textures and wave animation, compatible DX9, DX10 and DX11. The ultra-realistic environments of the airport are made of Aerial photography of high definition Give all airports the default in FSX and Prepar3D handling in the style of paid utensils, from light to heavy use of runways, shuttle buses and sidewalks! The textures are so detailed, including runway textured lighting in encaments. Coming out of HD original photography, marking runway tyres properly scaled within the simulator, creating a more realistic viewpoint. Runways with light or heavy wear... You choose over 32 to choose from, the textures of the highest clarity with the most fidelity on the market! The build-up of tyre markings is exciting when using the heavy-use runway option. Many types of runway grooving and runway lighting material encacement texture added to runways to give more depth and more properly scalable feel finally, dirty and soiled runway markings on all airport runways around the world! No longer are the bloated white marks

affecting your runway markings now support larger aircraft such as the Boeing 777 28, astonishingly detailed shuttle buses designed from all types of concrete, asphalt and bitumen runways and detailed planar impact-map effects Impressive relief reflection effects modelled on different materials. Support for ORBX airports Labeling high definition taxis with extraordinary clarity Beautiful photorealistic skies selected from many locations around the world. HDR texture option included for Prepar3D v2! Properly balanced values of light and shade terrain during dawn and dusk Smoother transition algorithms during dawn and dusk Realistic corresponding values of the haze layer when colliding with the appropriate types of WX 23 edge runway and shuttle bus lighting, some with simulated terrestrial glow Extremely detailed and enhanced effect of ground rain Realistic dirty airport parking and jet marks Easy to read, enhanced airport signage. Different lighting conditions dictate the range of colors from yellow to orange and red to amber. A wonderful brilliant finish with the matte black back of the Sun, corona, glow, flashes and special effects, which gives the most realistic reproduction of atmospheric conditions. Panning around your plane at different angles during the beginning or end of the day will give you how dynamic these effects can be. Available for DX9, DX10 and DX11! With REX leading the way in water rendering, the new technology built into REX Texture Direct will leave you free. Provided for DX9, DX10 and DX11. Sound effects of the environment. Jaws drop in/out of cabin precipitation and thunder sounds.
