We've been doing this a couple months (or longer) on the platform to the launch in so it might just not be as reliable, or used to be as actually had an option for that(wasn't ready to release). Playstation 3 has been the best major home console. Sony launched the Playstation 3 to critical success and great sales, during its release, the system included the innovative DualShock 3, PlayStationEye, and an improved Blu-ray optical disc and software. The system also included support for a wide variety of games with a large online community. The PlayStation 3 features an 8-core X86-based CPU, 2 GB of GDDR3 memory, and a powerful GPU. The system has sold over 73 million units worldwide. Playstation 4 Playstation 4 and PS4 are the next generation consoles being developed and created by the Sony Corporation and is planned to be released in 2014. The console will be a direct competitor to the Xbox One, Microsoft's next generation console. The PS4 is expected to be released by the end of 2014. The PS4 will be released to the public at a later date. With the PS4, Sony plans to reinvent its online services for the game console. There have been demonstrations of the system at the 2013 Tokyo Game Show and E3 2013. It is running under the user "NT Authority\Local Service", but I can't get any errors from the "C:\Windows\debug" logs, only when it is running as a service. Can anyone tell me if this is normal? Can I get errors logged as normal user? Or is there a reason why my service is not logging error? Thanks, A: Since you said that you can't get any errors from the windows logs, I'm assuming that the problem is with the SQL Server logs. I would check the SQL Server logs to see what kind of error is being thrown. Q: 520fdb1ac7
