How does WTF Page 2 have Smite servers in operation? Hi-Rez Studio popular MOBA can do some maintenance right now. Smith down? It's easy to tell if the servers are working or if you're having problems, and we'll show you how to find out for sure! Are Smite servers on maintenance? The first thing you might be wondering is: are Smite servers in operation? Smite can go on maintenance for several reasons. There may be problems with server hardware or developers may release a new patch. How can you find out? A good choice for your first stop is the official Smite Twitter account - any tweets about server maintenance or other problems will be posted there first. You probably also want to Hirez Operations Twitter; Twitter. The account will list any problems for any of its gaming servers on all platforms. If nothing comes to any of them, the next place you can watch is the Hi-Rez Studios Server Status page. This automated tool will tell you if there are any problems with the game's servers and it even has a platform of specific information. For example, Smite PS4 servers can be closed while PC, Xbox One, and Nintendo Switch servers are still running in great mode. Finally, your last stop should be the official news feed of the game. There's always a chance that the news hasn't quite hit Twitter just yet, but the news post may already be live to explain the problem. If none of these things work though, then you may have another problem completely. Smith down? If all the links in the previous section check out, then the problem may actually be with you. As always, you should try the following steps: Close Smite and Hi-Rez launcher and then try to run the game again. Reboot your computer. Restart your Internet connection. Reinstall Smite.If none of these work, it may indicate a more serious problem. At this point, you should apply for support from Hi-Rez Studios and see if they can help you solve this problem.
