E6-F2 E6-F2 means that the demolition key drive line is open. You cannot cancel this error code, but sometimes it is removed from the oven and reconnected. This is usually an error in the touchpad, but can also be caused by the electronic oven control. To test the oven, you must remove the control panel and disconnect the tape plug from the touchpad for oven control on the oven control. Clean the end of the ribbon and reconnect it. This will sometimes resolve the problem by healing a weak connection. When the error code returns, you should replace the panel that contains the touchpad. The part diagram for your furnace lists three panels. 8300427- black 8300428- white 8300516- Biscuit The part number for the electronic oven control is 8302319. Turning off the circuit breaker on the oven, which waits for 30 seconds and turns it back on, has got it back on track. Thank you. The last time I had to change the touchpad.
