

PowerISO 6.9 FULL Crack [TechTools] Download

The screenshot shows an IDE with a project named 'containers-api'. The file explorer on the left shows a 'venv' directory. The main editor displays a Python file 'hello.py' with the following code:

```
86 with detection_graph.as_default():
87     od_graph_def = tf.GraphDef()
88     with tf.gfile.GFile(PATH_TO_CKPT, 'rb') as fid:
89         serialized_graph = fid.read()
90         od_graph_def.ParseFromString(serialized_graph)
91         tf.import_graph_def(od_graph_def, name='')
92
```

The bottom panel shows the 'Run' output for 'Flask (hello.py)'. The output lists the stack trace of the error, starting from 'ObjectDetector._build_graph()' and ending with the message: 'tensorflow.python.framework.errors_impl.NotFoundError: Op type not registered 'TFLite_Detection_PostProcess' in binary running on MacBook-Pro-Ekaterina.local. Make sure'
