Stanchi microbiologia veterinaria descargar gratis pdf

Veterinary Microbiology Nestor Oscar Stanci 1st Edition Discharge Link: Summary In this new edition we have included the chapters of General Microbiology, Bacteriology, Immunology, Virology and Mycology, Environmental Microbiology, in addition to food microbiology, indivisible field of veterinarians in the new Health Paradigm. This means that during this edition we take the opportunity to update and clarify the above text, we had to review and even rewrite extensive passages, while including numerous photos and illustrations and color charts. In the same context, we invite new and prestigious national expert authors and foreigners to enrich this modern perspective of veterinary microbiology. We know that the task of condensing it into a book was a major editorial challenge. The selection of all authors was based on their academic background, experience and scientific and proven validity of each in different thematic fields. Therefore, the original purpose of this book is once again to present a documentary guide in a direct and pleasant style of reading, dodging confusing or very simplistic language often used to describe such complex scientific topics. It was important for us to preserve the historical roots of microbiology as an introductory pedagogical goal and thus be able to achieve a gradual and definitive understanding of modern knowledge. From this time perspective, retrospective references, such as taxonomic and reference literature, were selected. As advances in science continue in its various aspects, it is interesting to note that there has also been a parallel increase in the promotion of digital information: for example, new data from genomic sequencing, structural molecular interactions or protein expression to limit some examples, all accumulated in extensive databases. The challenge of writing a book like ours is that: turning this overabundance of information into an accessible account of how microorganisms work in the didactic transposition of authors' efforts. About Nestor Oscar Stanci Nestor Oscar Stanci MV, DCV, Bacht, Wedge, Wedge, and the Indus. Professor of Microbiology, Faculty of Veterinary Sciences, National University of La Plata and Catholic University cuyu. There is a balance between updating and deepening the basic knowledge needed to understand animal pathology and integrating them globally into clinical, food and environmental microbiology. This work harmoniously integrates health problems And animals. Its presentation is of particular value for solving the practical problems of zoonoses. CONTENT: PART I. GENERAL MICROBIOLOGY 1. History of Microbiology 2. Microbiological Science 3. Microbial evolution 4. Bacterial cytology 5. Concepts of Metabolism and Bacterial Nutrition 6. Microbiological laboratory material 7. Microscopy 8. Microscopic observation 9. Pick 10. Bacterial culture 11. Bacteriological March 12. Concept of sterilization 13. Immunoserological diagnostic tests in microbiology 14. Bacterial genetics 15. Laboratory animals 16. General concepts of virology 17. Virological diagnosis 18. Molecular Analysis Methods 19 ANTIMicrobials PART II. BACTERIOLOGY 20. Streptococcus 21. Enterokokos 22. Staphylococcus 23. Enterobacteria 24. Escherichia 25. Klebsiella 26. Salmonella 27. Shigella 28. Ersinia 29. Vibrio 30. Aeromonas 31. Plesiomonas 32. Pseudomonas 33. Acinobacteria 34. Avibacter, Hemophilina and Histophilae 35. Erispelotix 36. Listeria 37. Pasterella 38. Campylobacter 39. Brucella 40. Bacillus 41. Mycobacteria 42. Paratuberculosis 43. Mycoplasmas 44. Bacterial L-Shape 45. Leptospira 46. Borrelia 47. Bordetella 48. Neisseria 49. Moraxella 50. Acinetobacter 51. Anaerobic bacteria 52. Clostridia 53. Chlamydia 54. Rickettsia 55. Coxiella 56. Nocardia PART III. VIROLOGY 57. Adenovirus 58. Herpesvirus 59. Papillomavirus 60. Poxivirus 61. Circovirus 62. Asfarvirus 63. Parvovirus 64. Reovirus 65. Togavirus 66. Rabdovirus 67. Ortomyxovirus 68. Paramyxovirus 69. Picornavirus 70. Arterivirus 71. Coronavirus 72. Birnavirus 73. Calcivirus 74. Flavivirus 75. Rotovirus 76. Molecular diagnosis of viral diseases PART IV. Mushrooms or Eumycetes 78. Reproduction of mushrooms 79. Methods, materials, cultural media and reagents used in medical archaeology 80. Surface mycosis PART V. FOOD AND MISCELLANEA 81. Prions. Transmission spongiform encephalopathy 82. Microbial ecology 83. Microbial ecology in food 84. Foodborne Diseases (Ets) 85. Campylobacter: 86 zoonotic species. Biosecurity in Laboratory 87.
