When selecting Nearest Scanners the app first tries to determine your location through the network if it fails the app then tries to determine your location using GPS. Scanner Radio is an app that allows you to listen to police and fire radio scanners and broadcast radio fans around the world directly from your Android. The Radio scanner gives you the ability to listen to the broadcasts near you, but in case they do not radiate within 250 km., you can manually find the most popular broadcasts in the world. Most of them are in the United States. You can listen to police station radio scanners in different U.S. cities at any time. In addition, you can always see how many people listen to each broadcast. One of the great advantages of Scanner Radio is that it allows you to receive notifications on your phone when any broadcast exceeds a significant number of listeners, which usually means that something Happens. Scanner Radio is a very interesting tool that traditional radio lovers can use to continue practicing their hobby from the comfort of their mobile phone. Also, the sound quality is usually pretty good. Listen to live audio from more than 4,100 police and fire scanners, weather radios and amateur radio transmitters from around the world (primarily in the United States and Australia, with more being added daily) on your phone. Features: View the scanners that are closest to you are sorted by distance. air traffic, weather, railway, etc.) Include notifications that will be notified when a lot of people (like more than 1000, for example) listen to any scanner (indicating that something big is going on). You can also be notified when scanners located near you (or specific scanners of your choice) have more than a certain number of listeners. Add the Scanner Radio Pro Favorite label to your home screen to run the scanner channel through an app for an alarm clock or automation app. Note: You must have an account on Broadcastify.com and purchase their Premium Membership ($15 for 6 months) in order to access your archives via the app. One of the uses of this feature is to let the scanner channel start playing when your phone connects to a particular Bluetooth device and then stop it when the Bluetooth connection to that device is no longer present. In addition to the above features, you also get the following features with this version of the app: Ads are removed. The play button at the top of the catalog screens and on widgets can be used to start listening without having to go to the player's screen. Audio is provided by volunteers (primarily for Broadcastify.com) using real radio scanners. If you need help, please go ://support.gordonedwards.net/Explanation why different permits are needed: Phone / Read the Phone State permission needs an app so that it can detect when you place a phone call (or when one is being received), so that it can automatically stop streaming the audio to prevent it from interfering with the call. Location and Coarse Location's Fine (GPS) resolutions are necessary to allow the app to determine which scanners are in your area when you click on the Near Me button. When you click on Near Me the app first tries to pinpoint your location through the network, if it fails the app then tries to determine your location using GPS. Permission to automatically start downloading is required so that a small part of the app can start when your phone boots, if (and only if) you turn on the app notification function (this feature is off by default). Permission to change or delete the contents of your USB store and check access to secure storage is necessary to ensure that the app supports the ability to record the sound you hear and can keep it in a place you can access from your computer (requires that the Radio Pro scanner be present on your device). com.scannerradio_pro.permission.C2D-MESSAGE Customer Resolution. com.google.android.c2dm.permission.RECEIVE App customer permission. Bluetooth allows you to connect to Bluetooth paired devices. Changing sound settings allows you to change global sound settings. The Internet allows you to access the Internet. The state of the access network allows you to access information about networks. Access to an exact location allows you to access an exact location from sources such as GPS, cell towers and Wi-Fi. Access to a rough location allows access to an approximate location derived from network location sources such as cell towers and Wi-Fi. Wake lock allows you to use PowerManager WakeLocks to keep the processor from sleeping or screen from blacking out. Getting the download completed Allows you to get the download completed notification, which is broadcast after the system finishes downloading. Write external storage Allows you to write on external storages such as an SD card. Controlling media content lets you know what content is playing and control playback. Installing a shortcut allows you to install a shortcut in Launcher. Reading an external store allows you to read from an external store, such as an SD card. Card.
