The input is an object, so i want to call a method on that object. The problem is that when i call it, the text box isn't updated with the value of the object. What can i do to get this to work? HTML: JavaScript var myTextBox = document.getElementById("myTextBox"); function change(myObj) { myObj.text = "This text is changed"; change(myTextBox); A: The problem is that when i call it, the text box isn't updated with the value of the object. Yes, that's because change(myTextBox); runs the change function immediately and doesn't capture the return value of the function. Change it to: change(myTextBox, myTextBox); Cambrian Series The Cambrian Series is a group of Ordovician and early Silurian rocks of the Appalachian Basin, Eastern Canada, and Northern and Central United States. In the Appalachians it has been subdivided into the following formations: Cambrian (Ordovician) Spence Shale Agulhasite Cambrian Coastal Plain Shale Florence Limestone Aurora Conglomerate Upper 520fdb1ae7
