See details. Overview Henry Ford was an American captain of industry and a business magnate, the founder of the Ford Motor Company, and the sponsor of the development of the assembly line technique of mass production.

Although Ford did not invent the automobile or the assembly line, he developed and manufactured the first automobile that many middle-class Americans could afford. In doing so, Ford converted the automobile from an expensive curiosity into a practical conveyance that would profoundly impact the landscape of the 20th century. Product Details. Related Searches. It will be large enough for the family, but small enough for the individual to run and care for.

It will be constructed of the best materials, by the best men to be hired, after the simplest designs that modern engineering can devise. But it will be so low in price that no man making a good salary will be unable to own one They were received with interest rather than enthusiasm and I My Life and Work: An Autobiography of Henry Ford not recall any one who thought that the internal combustion engine could ever have more than a limited use.

All the wise people demonstrated conclusively that the engine could not compete with steam. They never thought that it might carve out a career for itself. That is the way with wise people--they are so wise and practical that they always know to a dot just why something cannot be done; they always know the limitations.

That is why I never employ an expert in full bloom. If ever I wanted to kill opposition by unfair means I would endow the opposition with experts. They would have so much good advice that I could be sure they would do little work. Even the man who most feels himself "settled" is not settled—he is probably sagging back. Everything is in flux, and was meant to be. Life flows. We may live at the same number of the street, but it is never the same man who lives there.

Ideas are of themselves extraordinarily valuable, but an idea is just an idea. Almost any one can think up an idea. The thing that counts is

developing it into a practical product. It is asked only because of the failure to grasp that a principle rather than an My Life and Work: An Autobiography of Henry Ford is at work, and the principle is so simple that it seems mysterious.

For everything is produced from the earth. Don't take the acumen of bankers as any guide for business, all they know is money. Put brains into the method, and more brains, and still more brains—do things better than ever before; and by this means all parties to business are served and benefited. No work with interest is ever hard. I always am certain of results. They always come if you work hard enough. But it was a very great thing to have my wife even more confident than I was.

She has always been that way. It is out in my museum along with the gasoline buggy that I began work on thirty years before and which first ran satisfactorily along in the spring of I was running it when the bobolinks came to Dearborn and they always come on April 2nd.

There is all the difference in the world in the appearance of the two vehicles and almost as much difference in construction and materials, but in fundamentals the two are curiously alike—except that the old buggy has on it a few wrinkles that we have not yet quite adopted in our modern car.

For that first car or buggy, even though it had but two cylinders, would make twenty miles an hour and run My Life and Work: An Autobiography of Henry Ford miles on the three gallons of gas the little tank held and is as good to-day as the day it was built.

The development in methods of manufacture and in materials has been greater than the development in basic design. The whole design has been refined; the present Ford car, which is the "Model T," has four cylinders and a self starter—it is in every way a more convenient and an easier riding car. It is simpler than the first car.

But almost every point in it may be found also in the first car. The changes have been brought about through experience in the making and not through any change in the basic principle—which I take to be an important fact demonstrating that, given a good idea to start with, it is better to concentrate on perfecting it than to hunt around for a new idea.

His work honours him. Welcome back. Just a moment while we sign you in to your Goodreads account.
