Why Phase 2 of Microsoft's AI Takeover Plan Could Make Investors a Mint

Evidence is mounting that Microsoft is quietly making a new play that could be FIFTY times larger than its initial investment in Open AI and ChatGPT.

We call it Phase 2 of Microsoft's AI takeover plan.

And if our research is correct, unlike Phase 1 where investors couldn't invest directly in AI applications like ChatGPT...

Phase 2 revolves around a little-known publicly traded stock that our analysts believe could be one of the most vital companies to AI's future.

Now, I know that's a big claim, but just consider this...

Experts predict that Microsoft will spend approximately **\$50 billion a year** on what's called hyperscale AI datacenters to meet its growing demand for generative AI.

And from the looks of it, they've already gotten started.

In August 2023, Microsoft broke ground on a \$1 billion datacenter in Wisconsin...

In November 2023, they filed paperwork for its sixth datacenter in Des Moines...

And in the same month, Microsoft announced that it will spend \$3.2 billion to expand its next-generation AI datacenter infrastructure in the UK too!

And the thing is, it's not just building a few new datacenters here and there.

For the foreseeable future, Microsoft is hellbent on establishing 50 to 100 datacenters EVERY. SINGLE. YEAR!

And guess which company provides the hardware Microsoft needs to ensure these billion-dollar data centers are up to speed?

This little-known stock!

According to *Yahoo*, this stock provides what's called network switches that help speed up the communication datacenters

need to process up to 25.6 terabits of data per second.

And these switches are absolutely crucial in harnessing enough power to keep AI datacenters running smoothly.

Even *Forbes* has reported that when it comes to AI networking, experts say this company will continue to be one of its biggest beneficiaries.

But here's the real kicker...

Not only has this company already returned 92%+ to investors in 2023, and a whopping +386.21% since we first recommended it in Sept. 2017...

With an estimated total addressable market of \$51 billion, this company (which is only 1/42nd the size of Microsoft) has only tapped into 10% of its market potential so far!

So, if you're an investor who feels like you've been iced out from investing directly in OpenAI and ChatGPT...

This stock potentially allows you to get in on the ground floor of something that could be much bigger!

In fact, our analysts are so excited about this stock that they've included it in our brand-new FREE report called **Top Stocks for 2024**.

And you can get the name and ticker of this stock, plus fourteen other stocks just like it by becoming a member of *Stock Advisor* today.

In my opinion, this may be one of our most comprehensive and timely reports of the year.

It includes write-ups and recommendations on growth stocks, dividend stocks, international stocks...you name it.

And...

If you join today, you'll get access to our 30-day membership fee-back guarantee.

This means that you can read this brand-new report...

Check out and invest in our newest stock recommendations...

And if after all of that, you still don't like our service, you can cancel anytime within 30 days and get your membership fee back – fully guaranteed!

So why wait?

Why not add this little-known stock to your portfolio today?

Do you know which stock we're talking about?

No

Yes!

Returns as of December 5, 2023.
