

Who stands to profit the most from the AI Gold Rush?

**Kael Dixon**

Investing

October 29, 2025

Dear Wealth Conscious Friend,

They say history has a way of repeating itself.

Over 170 years ago, a gritty visionary by the name of Samuel Brannan made a fortune as one of the earliest investors in the California gold rush.

He minted his fortune not by toiling in goldfields, breaking his back to dig for gold...

Not this guy...he invested in the tools miners needed to pan for it!

And he made so much money, nearly \$43 million a year in today's dollars, that he became the richest man in California, almost overnight.

Now, I'm telling you this story because although the days of panning in streams are over, the days of fortune-hunting are not.

You see, there's an A.I. gold rush sweeping the globe.

And this shift, according to experts, is expected to create approximately US \$1.5 trillion in market-value by 2030.

"The world's first trillionaires are going to come from somebody who masters AI." - One Famed Dot-Com Billionaire

"Machine intelligence is the last invention that humanity will ever need to make." - Nick Bostrom

You see, with companies like Microsoft and Google battling to merge this technology into their search engines...

Savvy investors are chomping at the bits to get in early and to get rich.

Now, don't get me wrong, investors can always buy more stock in Google and Microsoft. But as great as these companies are, they're more like the miners panning for gold...

...Like Mr. Brannan, I want to know what companies are selling *the tools* these companies need to find it.

Now luckily for you, our *Stock Advisor* team has found just that company.

In fact, we believe this stock has the potential to become one of the top stocks we've ever recommended here at The Fool when you consider A.I.'s potential.

Because we believe this stock has created one of the most critical tools in the artificial intelligence industry — the chips used to power AI's technology.

And according to *CNBC*, big companies and startups looking to create chatbots and image generators require hundreds or thousands of this company's chips.

See, much like John D. Rockefeller's Standard Oil was to oil refining...

...Or how Netflix was to streaming...

... we believe this stock is to artificial intelligence!

In fact, according to *New Street Research*, this company already has nearly 95% of the market for graphics processors that can be used for machine learning, which is a subset of A.I.

Ninety-five percent.

My friend, we don't think you need to be a rocket scientist to potentially make a fortune with this stock ...

...We believe you just need to get in early.

And one of the ways you can do that is by understanding everything you can about this stock before you invest.

And that's why our team of analysts have released our newly updated report called, ***AI Disruption Playbook***.

In this report, you'll discover the details of this stock plus four others just like it.

In fact, this stock is the last stock featured in the report.

And you can get it for FREE with a subscription to our market-crushing service, *Stock Advisor*, today.

The average stocks we've recommended in *Stock Advisor* have returned 1,065% to date – and crushed the S&P 500 by five times.

Don't wait to find out.
