

Rules for wealth management operations

product presentation

Ekbit's investment and wealth management product is a crypto asset growth solution featuring flexible deposits and withdrawals. Users can earn daily returns by transferring idle coins into investments, with features including instant deposits, daily interest accrual, and a minimum deposit of 10,000 USDT. Backed by Ekbit's rigorous risk control system, this product ensures secure asset protection while delivering reliable returns.

Product rules

The investment and wealth management assets will be used for ekbit's cryptocurrency high-frequency trading and mining business. The investment and wealth management services only support the storage of the USDT currency on the ekbit platform.

Transfer in and transfer out rules

Users can transfer in and out at any time, real-time arrival.

When users transfer investment and financial assets, they choose to transfer the funds on a fixed date without interest calculation. The income will be calculated from the next day, and the income will be received on the third day. After the interest income is received, it will be automatically distributed to the user's coin account to start calculating interest.

Interest distribution rule

High-frequency quantitative trading and mineral income will be used for interest distribution of investment and financial users. ekbit will allocate interest according to the regular quota signed by users every day. At present, all this platform income will be injected into the mineral capital pool to increase the layout of the platform's mineral industry.

Annualized rate of return (based on user storage quota)

Daily yield = Today's distributable interest/annualized total return day

Daily revenue calculation is based on the total revenue divided by 30 days according to the distributed storage quota.

Minimum interest calculation rule

For USDT currency, in the investment and financial deposit, if the amount of deposit is less than 10000USDT, no interest will be charged.

Distributed storage interest is updated at 0 o'clock every day.
