Hidden secrets of the Aqueon hood UVC system UVC - the unsung hero of the underwater domain.Q: How to edit nth-child with jquery I'm trying to edit nth-child with jquery. The condition is simple: if selected value in checkbox is true, do if nth-child is If both conditions are met do a specific action, if only one of them is met do other action The code: \$(document).on('change', 'selectable', function() { var condition = \$(input[name="condition"]:checked).val(); if(condition == 'true') { if(\$(sample:nth-child(1))).css('display') == 'none') { \$(sample:nth-child(1)).css('display', 'block'); } if(\$(sample:nth-child(3)).css('display') == 'none') { \$(sample:nth-child(3)).css('display', 'block'); } else { if(\$(sample:nth-child(2)).css('display') == 'block') { \$(sample:nth-child(2)).css('display', 'none'); if(\$(sample:nth-child(3)).css('display') == 'block') { \$(sample:nth-child(3)).css('display', 'none'); } } }) But it is not working. I assume, that my JS is wrong, but I can't figure out what is wrong. I tried to rewrite it a couple of times, but I couldn't figure out how to do it right, or I just don't see the problem. 520fdb1ae7
