People's intuition is often wrong, and it is often difficult for people to rethink their thinking. There are four principles common to many design thinking approaches: observe and notice; Frame and reframe; Present and design and do and experiment. For each of these design thinking recipes, this article analyzes the socio-psychological phenomena involved and illustrates the practical application of the real design thinking project at IDEO. Design thinkers and their companies can use these ideas from social psychology to inform and inspire the design thinking process.
