

Allieds' DPI® Clean Energy Risk Platform

Solar, Fuel Cells, Energy Storage

Solar Module Performance

Backstop of the PV module manufacturer's original Performance and Product Warranties.

Flexible to enable manufacturer's global sales or dedicated sales into projects, markets or customers.

Applicable to both brownfield and greenfield projects; for ground-mounted, rooftop and floating solar.

PV Project/System Performance

Cover long-term project cash flows through a Performance Ratio Guarantee or a MWh Guarantee (includes irradiance risk).

Applicable to project developer, EPC (M), O&M, lender; single large utility projects, global portfolios of asset managers or C&I and residential portfolios.

Fuel Cell System Performance

Backstop of the manufacturer's original Electrical and / or Thermal Performance warranties. Flexible to enable manufacturers' total sales (i.e. balance sheet protection) or dedicated customer sales (i.e. market differentiator).

Energy Storage Performance

Backstop of the manufacturer's original State of Charge (SoC) Performance Warranties.

Coverage may include the battery management system (BMS) for application at utility, commercial and residential site applications, as well as the growing e-mobility market

RISK TRANSFER to a STRONG COUNTERPARTY

This guarantee adds a third party to the funding table by transferring risk to a high worth finance counterparty that provides a level of financial support to the Start-up of the process and later, protects the projects' senior debt requirement.

Other guarantees are available within the DPI® Platform for;

Wind Energy

Bioconversion System Performance
