Biota of the internet basis: A proportion of today's information resources are data sources, some of which are machine-readable publications. It is a 100% automatic targeted traffic generator and search engine optimizer [faucet] (in real time). Rona Shahini, who is the founder and chairwoman of the international nonprofit group Harm Reduction International, says that laws such as those in France and Canada, which criminalize needle-sharing among drug addicts, can negatively affect harm reduction programs. Currently in Canada, while intravenous drug users are not legally allowed to share needles, they may share sterile water containers, a fact that has made the country a prime destination for international harm reduction volunteers. "It's a controversial topic, but I do not think that harm reduction should be an issue of criminalization," she says. Shahini is a graduate of the University of Ottawa and a former public health professional. She began Harm Reduction International to address drug addiction and its effects on communities in Africa, Asia and Central and South America. In 2002, while still a student in Africa, Shahini visited the Khayelitsha township of Cape Town, South Africa, where she discovered the problem of poor sanitation and health conditions in the area. Since then, she has been helping to address health and sanitation issues in impoverished communities around the world. "Harm reduction is really an issue of life and death," says Shahini, who was an official of the Ottawa Regional Alcohol and Drug Abuse Centre (ORADAC) for three years. She added that she would like to see a permanent place for such programs in Canada, along with more resources to fight drugs. Shahini says that most drug addicts already have access to information and counseling, but lack clean needles and other equipment that could help prevent infections.

Q: How to disable the recycle button on MessageBox on WPF I have a popup MessageBox in my WPF app and would like to disable the "recycle" button. I'm using a ResourceDictionary to centralize the styles of the controls I'm using. Is there an XAML property that I can use to disable the recycle button? I can't seem to find anything on the Microsoft MSDN documentation for MessageBox. 520fdb1ae7
