Alicia who sees mice

This story appears in the May 2001 issue of the entrepreneur. Every teenage girl has a longing for beauty, whether she's really into makeup or she's a total tomboy, said Ann Fowler, co-founder of BeautyQ.com Inc., a fashion and beauty portal that focuses exclusively on teenage girls. Emphasizing the importance of beauty from head to head, inside and 24 hours, Beauty offers content, interactive and personalized features, and an e-shop selling more than 120 of the latest products you need to have. Beauty's research shows that teenage girls spend up to 20 hours a week online, and they've even come up with their own Pure Language, generated by instant messaging on the Web.Fowler, 32, and her business co-founders, Angelica Finan, 33, and Dina McNee, 34, started the Reston, Virginia-based company last year. We looked at the beauty space and decided there was a lot of beauty electronic tails out there with strategies we didn't like, says Fowler. One of the points in our business plan is that teenage girls don't want to wade through their mothers' website that talks about how to get rid of age spots. Teenage girls can enter beauty and get tips on everything from fashionable clothes and celebrity hairstyles to eating and exercising. They can even get a beauty profile called Profile Me, which asks girls to provide 13 pieces of information about themselves-hair color, eye color, height, skin tone and so on. The computer then sends back one of 4,300 different beauty profiles, full of hip tips and tips on achieving the look. With expert advice and custom input, Fowler looks forward to forming partnerships with offline companies that will keep Beauty' stocked with these hair-thickening products girls want so badly. We may receive commissions for purchases made on selected links. If you're always on the go, then owning one of the best travel mice is crucial. Traveling mice will allow your wrists to have the comfort of your home computing set up anywhere. These mice connect to your laptop (and can connect to your desktop), creating more mobility than a traditional trackpad. Wires matter. When there is no long cord to untangle during your commute, you know you have a great mouse traveling. Have With retractable cords like the Sabrent Mini Travel Mouse on Amazon, or wireless options like VicTsing Wireless Mouse and Mouse Pad on Amazon, which comes with a mouse pad! You can customize your needs when choosing the best travel mice for you! Viccin has so many many packed in that it is almost incomprehensible that this little mouse is so budget friendly. Let's forget them: the mouse comes with five adjustable optimized CPI settings (indicating mouse tracking speed) - 800, 1200, 1600, 2000 and 2400. If you have the sensitivity set right, you can bet that the thing will last a long time since the company tested it on 5,000,000 keystrokes. The 2.4GHz wireless and optimized chip allows wireless connectivity of up to 33 feet. Ergonomics is also thought out with slots and indentations for each finger, while battery life provides the maximum possible game on one AAA. Finally, the mouse supports almost any SUN-controlled OS with compatibility for Windows, Mac, and even Linux. Logitech's Ultrathin Touch Mouse T630 wireless, weighs 6.88 ounces and measures 1.73 x 5.43 x 4.09 inches. The portable T630 is roughly the size of a credit card and is built with a brushed metal body and a smooth silky surface. Unlike other portable mice on the list, it includes Bluetooth wireless technology to connect and charge via USB to full charge within minutes. The device has intuitive gestures with Windows 8, such as zooming in images and scrolling. Note that because there is no universal compatible device, the T630 comes in two versions for Mac and Windows. Sabrent's mini-travel USB optical mouse is the best on the availability list. It is a mouse that meets the middle both in price and in value; You'll pay the affordable price for one of the highest rated travel mice on Amazon to date. The Sabrent Wired mini mouse has a plug-and-play feature where it doesn't require installation software: it's compatible with both the computer and the Mac. Its ultra portable design means it weighs just 1.5 ounces and measures 2.44 x 6.46 x 1.57 inches. It includes reliable and lightweight ABS for silent-pressed, multifunctional wheel, and 1200 DPI for optical precision tracking. Please note that it only comes in black. To date, one of the most exciting and terrestrial travel mice is the Microsoft RVF-00052 Arc Touch Mouse. It is built with a flexible curved design that can be manipulated and bent to warp to your comfort, as well as flattened for easy storage. Microsoft's Arc Touch Mouse does not include a physical scroll wheel, but instead reacts with precision to the speed of the finger on its sensor. It uses light vibration feedback to scan through documents and web pages. The RVF-00052 incorporates BlueTrack technology, developed with a combination of optical and precision lasers, making it adaptable to any surface. In addition, this mouse includes two AAA batteries with a battery life of up to six months and are compatible with the most modern operating systems on the market. Little Verbatim Mini Travel Optical Optical measures 8.5 x 1.5 x 4.9 inches and weighs just three ounces. It is equipped with a retractable USB cable and offers a USB 2.0 interface compatible with USB 1.1. Ports. It works with all modern operating systems across the board, including Mac OSX, Windows 7 and Linux Core 2.6 and above. Unlike some of the other mice on the list, Verbatim offers a one-year limited warranty in case something goes wrong with the mouse. Buyers love the product for its small versatile design. Colors come in black, blue, pink, purple, red and green. Targus' Cord-Storing Optical Moue AMU76US has an ergonomic shape and design, a retractable USB cable and 1000 DPI optical sensors. Targus Cord-Storing Optical Mouse AMU76US weighs just 3.2 ounces and measures 2.25 x 1.5 x 4.25 inches. It comes in a black-and-grey design and is compatible with Windows and Mac operating systems. Comes with a one-year warranty. Razer has earned its place on these lists as a kind of industry standard for major gaming gear. But after clearing the range, we end up going with one of Logitech's best gaming horses. The G403 comes with its own set of impressive specifications: 1 ms response speed of 1000 Hz (both wireless and USB), a sliding ratio that rivals even wired at home mice, a 20-million-dollar click strength rating, a 32-bit ARM processor, and the ability to customize its LED color to 16.8 million in different ways. Also, if you have little battery, it allows both charging and wired work. But our favorite part about this is that the thing doesn't look needlessly flashy like most gaming mice, so it will be just as home responding to emails on a train as it owns FPS opponents in your hotel room. What to look for in the travel mouse retractable cord - Choose a travel mouse that comes with a retractable USB cord if you need a wired mouse. The great thing about retractable USB cord is that it makes the mouse that much easier to pack and store in any limited space you work with. Wireless - If you don't mind packing extra batteries, wireless mice make good companions. Since there is no wire to worry about, you are free to position the mouse on any surface comfortably. Look for one that uses Bluetooth instead of a nonfree connection if you don't want to worry about keys. Optical vs. Laser - Optical mice are less accurate and sensitive than laser mice, but they work better on a wider range of surfaces. If you don't think you'll always have the perfect surface available and you don't want to tow around a tight mouse pad, choose an optical mouse or hybrid. Our editors self-research, test, and The best products You can find out more about our review process here. We may receive commissions for purchases made on selected links. The best vertical mice should help load on the wrist because of its ergonomic shape. Some vertical wireless mouse tends to come with a receiver or Bluetooth support to help cut the cord. Our best choice is the Anker AK-UBA Wireless Vertical Mouse on Amazon. It has a comfortable and compact wireless design, buttons for sensitivity control, and has been running for months with a pair of AAA batteries. If the vertical mouse doesn't suit you, take a look at our list of the best ergonomic mice, and you'll find a good option. Read on to see the best vertical mice. Anker produces hundreds of reliable, good computer and phone accessories, and its vertical mice are no exception. This model ticks all the right boxes, with a convenient and compact wireless design, a button to control sensitivity, and forward/back buttons to go with the usual left and right click options. This pair of buttons doesn't work with Macs out of the box, but various third-party apps allow you to get around this problem. It runs away a pair of AAA batteries (not included), which will last from one month to several, depending on how much you use the mouse and the quality of the batteries. The mouse enters energy-saving mode after a few minutes of inactivity. Unlike some models, this one only comes in the right version, so left-handers will unfortunately have to look elsewhere. It's about the only flaw, though, in a mouse that delivers excellent value for money and relies on hassle-free 18-month warranty. Wireless mice have become the standard in recent years, and for good reason: without cable, they are smaller and easier to use. This doesn't make them ideal for any situation, however. Wired mice are usually a little cheaper since they don't need extra electronics inside, and you never need to worry about the battery being flat at a vital moment. They are also more reliable, without the outages and slow response times that sometimes haunt wireless models. Realizing this, Anker replicated its successful wireless vertical mouse into a wired model, and that's just as well. As expected, it's a few dollars cheaper, and nearly five feet long enough for almost every desk and computer setup. It has the same five button setup (with the same back/forward restrictions on MacOS), and adjustable sensitivity - only two levels, in this case, not three on the wireless version. Again, left-handers are sadly left out, as only a right-handed model is available. Because of their design, and because many people buy them to help cope with wrist pain, it is very important to choose the right size vertical mouse for your hand. Many are made for so-called medium-sized hands, and if your bigger or smaller, these models don't especially comfortable. This Jelly Comb vertical mouse is specially designed for people with small hands, and comes both left and version, in a small range of colors. A smaller size does not mean a reduced feature set, however, with three sensitivity settings, forward/back buttons and a quiet focus. By connecting via a standard USB-A receiver, the mouse uses a single AA battery (not included), and the receiver is placed inside the battery compartment when not in use. It works on Windows, MacOS and Linux, although like most other non-Apple mice, the back/button doesn't work out of the box. Well priced and with a lifetime warranty, this is a good, fuss-free vertical mouse option for those with smaller hands. Evoluent has been the largest player in vertical mice for a long time, steadily improving its signature models every few years. Now on its fourth iteration, the latest VerticalMouse looks and feels like a premium device, with features and a price tag to match. As well as the left/right/medium buttons at the front, there are a pair of forward/back buttons below the spot where your thumb sits, and a button for cycling through four sensitivity settings. It's one of the very few vertical mice shipping with Mac Drivers that allow card buttons to perform any function you like, bypassing the incompatibility problems that plague most others. Unusually, too, the wireless model uses Bluetooth rather than relying on the USB key that you need to connect. Especially these days USB-A sockets are disappearing from laptops, this is a welcome addition. There are a wide range of models available in the VerticalMouse range, so be sure to get the right one for your needs. Versions are available in wired and wireless, for left and right people, in different sizes, and for Mac or PC. Not all possible combinations are covered, but for most people, Evoluent has the best range of vertical mouse options if they are happy to pay extra money for them. It is relatively rare to find wireless vertical mice that use Bluetooth instead of a separate USB receiver, and even less often to find any that costs about the same price. Enter MOJO Silent Mouse. While the biggest advantage of this mouse is not the need for a spare USB-A port (if you even have one available), MOJO has another trick up your sleeve. All six buttons and a scroll wheel are designed for almost silent work. If you use your computer around other people in a quiet environment, they will be very grateful for your decision to purchase. Using a pair of AAA batteries (not included), it works on Windows, Linux and Mac. Like most of the other mice listed here, you'll need to use a third-party app to get the forward/back buttons running on MacOS. The biggest bugbear with any wireless mouse, vertical or otherwise, is its reliance on batteries. You can The degree to ensure that they will go flat at least a convenient time, usually when you have no replacement in hand. The people behind this The rechargeable model must have gotten sick with flat batteries, like the rest of us, and decided to do something about it. The built-in lithium-ion battery is charged using a standard micro-USB cable (there's one in the box), and although it doesn't last as long as the interchangeable battery, charging quickly and you can continue to use the mouse while it does so. It's a definite victory. In addition, it's a fairly standard vertical mouse, with Windows and Linux support, forward/back buttons, USB receiver and adjustable sensitivity settings. Given that it's about the same price as other wireless mice that use disposable batteries, 7Lucky makes a lot of sense for those who are trying to reduce their environmental impact or who are just tired of replacing flat batteries. The Logitech MX Vertical is a high-quality (and therefore expensive) wireless vertical mouse. It has an ergonomic design that allows your hand to be in a handshake position at a 57-degree angle, ostensibly helping to reduce muscle tension. In addition to the design, the mouse itself is packed with features. It boasts a 4000 DPI sensor for accurate tracking, it can run on three different computers and transfer text, files and images between them using Logitech Flow. It works on both Windows and MAC with a combined USB reciever or Bluetooth. You can also connect it manually with the charging cable on. The battery recharges, staying powered for 4 months on a full charge, and it can juice enough to get 3 hours of use out of 1 minute charge time. The final verdict of the Best Mouse verticle for most people is anker AK-UBA Wireless Vertical Mouse (view on Amazon). It's an affordable and convenient ergonomic mouse with buttons to control sensitivity, wireless USB receiver and long battery life. As a wired option, we also like the ergonomic optical USB anker's Wired Vertical Mouse (Amazon view). It has a similar form to a wireless model, but comes with a five-foot cable and does not require batteries.
