

Dr. Amy Helwig currently serves as the Executive Vice President of RTI International's Commercial Health Payer-Provider Division, an industry leader in helping to design, deploy, and optimize value-based care programs and analytic solutions for patient engagement and population health. Dr. Helwig is recognized nationally for developing innovative programs in quality, safety, and Health IT to drive value and improve patient outcomes.

Prior to joining RTI, Dr. Helwig was Chief Quality Officer and Vice President of Quality Improvement and Performance at the University of Pittsburgh Medical Center Insurance Services Division where she led quality, safety, and performance programs over all insurance lines of business covering 3.4 million lives. This included leading the development and implementation of quality programming for all value and alternative payment models and outcome-based centers of excellence. Earlier in her career, Dr. Helwig served as Deputy Director of the Center for Quality Improvement and Patient Safety at the Agency for Healthcare Research and Quality (AHRQ) where she led the development of common formats for national patient safety event reporting and AHRQ's Patient Safety Organization program, as well as prototyping diagnostic safety measures. She was on the team that developed the national scorecard of patient safety measures for the CMS Partnership for Patients. As the Director of HIT Safety and Clinical Informatics and Acting Chief Medical Officer at the U.S. Office of the National Coordinator for Health Information Technology, she guided national quality improvement and population health programs and promoted development of new policies for health IT safety and usability. Dr. Helwig is board-certified in both clinical informatics and family medicine and a graduate of the Medical College of Wisconsin.
