Image: PexelsIf you're an Apple Music user, you may have felt a little left out a few weeks ago when people started sharing their Wrapped Year in a review from Spotify. Now a new app can help make magic happen for you as well. Music Year in Review is a free iOS app created by NoiseHub that looks at Apple Music's data for the year and creates a somewhat shuffled graph with what it finds. Thanks to the growth of music streaming services, it has never been easier to find new music, so why the same ... MoreIn the app is not made by Apple, but is only available on iOS for use with Apple Music accounts. To use the app, simply download it to an iOS device that you also use to access Apple Music. From there, you'll be asked to enter your email address (we recommend using a one-time one-time address) and give access to your Apple Music data. After that, it will return three graphics: one with the time you spent listening to your top artist, one with your favorite genre, artist, and song, and the final graphic with the top 5 songs of the year and the top 5 artists. Image: A year at ReviewFor me, it was pretty lame because I use Apple Music only for white noise when I sleep, but if you use it for everything, then you should get some solid answers. Is this all life-changing information? No, but it's interesting to see which artists and songs you've listened to the most during the year. Sharing these discoveries on social media with friends can also sometimes lead to discovering you and a buddy have a favorite in common, or perhaps even working as an offer for your friend to check out some of your favorites if they haven't already. It's not exactly easy, and definitely not safe. This is the time of year when we all thank, and among many other things, we are here at Lifehacker... Use mac app Alchemy to prevent unknown people from sending data. It handles conversion for you by turning multiple file image types into PDF, JPG and PNG. It lives in your bar menu where, when pressed, it will open the drag and drop the box. You can also access it directly from the keyboard **⌘** on ShiftB. From there you can throw in multiple images of different types of files and choose whether you want to convert them into JPG or PNG files, or photos in a single PDF. It handles only a few file types at the moment, although you'll be able to convert multiple images into one GIF once Alchemy adds more supported filetypes in the future.
