in delphi. Can anyone suggest a solution please? A: Well, you have the obvious option to open a connection and run a command. This is easiest if you use a connection manager, such as the popular ODBC Data Source Administrator, but even a simple TADOConnection.Connect() will suffice. However, if you have this kind of situation where the remote server sends data to the client, you should really consider using a web service to access that data. That's what they're designed for. Of course, if your code is really tied to the client, you might as well just use Delphi's own HTTP server. Q: How to use HorizontalReflowEvent in Flutter? I try to use Flutter HorizontalReflowEvent. in flutter this can only be used in ListView or GridView but in my case i use a CustomScrollView i want to use HorizontalReflowEvent in my ScrollView After searching for a long time, I found the solution. I guess you can use this property: horizontalScrollOffset={Offset(0, -size.height/2)} and this method: @override void didMoveToWindow() { super.didMoveToWindow(); _setReflowCount = 10; var reflowStart = (new DateTime.now() - new DateTime.now()).millisecondsSinceEpoch; _reflowTimer = new Timer(new Duration(reflowStart), ref => { // some time after reflow events should be handled. setReflowCount(reflowCount + 1); if (reflowCount > _setReflowCount) reflowCount = _setReflowCount; }); } Perspective: despite continued progress, very little is known about the epidemiology of severe lupus and its complications. Table of Contents INTRODUCTION Lupus is a complex, systemic disease with an incurable etiology. In the United States alone, its prevalence is estimated to be greater than 1 million, with a racial disparity that favors African 520fdb1ae7
