But for more than a decade, this has been a secret crisis. The public has known next to nothing about it. And the general population has been told nothing about it by Congress. Senator Elizabeth Warren said it even more bluntly in a letter she sent to Attorney General Eric Holder in June 2014: "The Board of Directors has told you that public disclosure of the crisis in the Bureau's jails is not in the public interest. They say that this is a secret detention system, and that is because it is." At the highest levels, this crisis has been actively hidden for more than a decade. The Department of Justice has been grossly negligent in its response to this crisis. And the FBI has failed in its most basic duty to protect the American people. The FBI needs to be reformed. And it needs to be reformed now. The purpose of the Center is to discover and develop new inhibitors of sepsis by targeting endothelial cells (ECs). The specific aim is to identify and develop EC-specific inhibitors of the proteinase that activates the coagulation system in sepsis, the tissue factor (TF). These inhibitors will be either peptides or small molecules that bind to the domain in the surface of the cell that is responsible for the coagulant activity of TF. Specific aims for the next three years include: 1) identification and cloning of the DNA segment on the human TF cDNA that encodes the domain responsible for the coagulant activity of TF; 2) identification of proteinase inhibitors that are capable of inhibiting the activity of the coagulant domain of TF and use of these inhibitors in animal models of sepsis; 3) 520fdb1ae7
